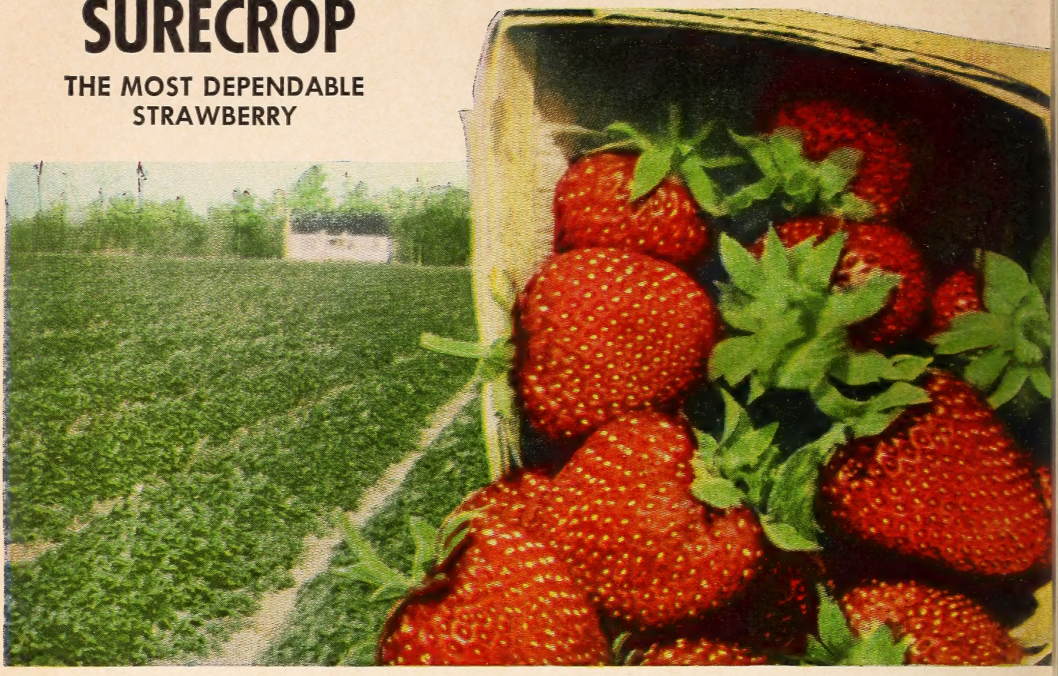
SURECROP

THE MOST DEPENDABLE STRAWBERRY



In addition to its big yield of excellent berries this amazing variety from the U. S. Dept. of Agriculture has triple resistance to the red stele disease; resistance to Verticillium wilt; resistance to leaf diseases; and drought resistance. These features, combined with its unusual vigor and hardiness, make Surecrop the easiest of all strawberries to grow and the most dependable variety. No wonder it is a "surecropper" for thousands of commercial growers and home gardeners throughout most of the eastern half of the United States.

If you want a strawberry that is truly outstanding for profit or pleasure you will certainly want Rayners' registered virus-free stock of Surecrop with its abundant production of large, firm, delicious berries.

See page 9 for further details and page 20 for complete prices.

25 PLANTS $2.00; 100 PLANTS $4.50; 1000 FOR $20.00. Complete Price List Page 20.

Crimson King Maple

Plant Patent No. 735

The Crimson King variety of Norway maple has long been famous for its deep scarlet foliage which is so different from other trees. It has such beauty and excellent growth habit that it was granted a plant patent. The leaves vary in color from deep scarlet to purplish-red depending on growing conditions. This fine color holds throughout the season.

To improve shipping difficulties we are offering only the 3-4 ft. whips which will get off to a flying start and soon develop into magnificent trees. This type of tree is especially dependable.

Your lawn will take on a new look of distinction when you plant your Crimson King Maple. We know you will always cherish one of these beautiful trees.

Vigorous, well-rooted, unbranched trees, 3-4 ft. size $4.95. Fully guaranteed.

Prices in this catalog DO NOT include postage. See page 21 for Postal Rates.

BUY RAYNER'S PLANTS AND YOU BUY THE BEST

To Our Customers and Other Friends

Jack Rayner
President

We welcome you as a reader of Rayner's Berry Book for 1966. Here you will find a source of the best possible planting stock of berries, fruits, and other plants listed in the index on page 4. Our plants are as hardy as any of the same variety regardless of where they are grown. We have thousands of satisfied customers throughout the northern states since our modern storage facilities enable them to obtain fully dormant plants for their late planting season. Since we can dig plants early in the spring we are also able to meet the demands of our many friends in the southern area. Our careful packaging and prompt service will assure you of receiving top-quality plants when you want them.

P. C. Massey
General Manager

Our reliable guarantee is shown below and also of special interest to you is the Rayner policy of honest dealings with our customers. We realize that satisfied customers are the backbone of our business and we will make every reasonable effort to provide you with top quality plants and service.

We hope you will read the planting information in this catalog since it will help you to have good results with our plants. With each order we also send planting instructions and we also have special leaflets that are available, upon request, for culture of any of the stock we sell. Give our plants good treatment and they will reward you many times over with abundant crops of the best fruit.

Yours for continued success with Rayner's plants.

H. JACK W. RAYNER, *President*

"We guarantee you will receive top quality stock. If for any reason you are not pleased with our plants, write us within 30 days and we will replace the plants or refund the complete purchase price. After the 30 day period and within one year of the date the plants were purchased, we will replace at one-half price any plants that are not satisfactory. This guarantee covers full purchase price and does not imply any further responsibility or liability." This guarantee applies to all of our nursery plants that are planted during the spring season and to strawberries planted by July 1st.

How to Order from This Catalog

As you read about the various varieties, you will find the price given with each item. There is a special Strawberry Price List on page 20. Fill out the order sheet plainly and completely, being sure to give full address. For most rapid delivery of plants by mail we recommend the Special Handling service of the U. S. Post Office Department as explained on page 21. None of our prices include postage so please determine the approximate amount needed to mail your order by consulting the postage table. If too much is sent for postage it will be refunded at time of shipment; if insufficient payment is included we will request it after shipment. If there is more than $2.00 unpaid postage we will send C.O.D. for the correct amount.

We are also able to deliver by United Parcel Service to their Eastern Area. This includes all of West Virginia, Maryland, D. C., Delaware, New Jersey, Pennsylvania, Connecticut, Rhode Island, Massachusetts, New York, and parts of Maine, New Hampshire, Vermont, and Ohio. Delivery within 2 or 3 days is generally provided and rates are approximately 5c less per pound up to $1.00 and 10c less over $1.00 than the corresponding postal rates shown on page 21. Please include the approximate amount with your order and we will make any necessary adjustment as soon as the plants are shipped. Packages sent by United Parcel Service are limited to 50 lbs. in weight and not more than 100 lbs. can be delivered on any one day.

For shipment of more than 5,000 strawberry plants; bundles over 6 ft. tall; or single bundles weighing more than 50 lbs. some other type of shipment is necessary. Many growers pick up their orders at our nursery which is located 4 miles east of Salisbury on route 350. Local motor freight companies will give 24–48 hour service to the following terminals: Allentown, Pa.; Harrisburg, Pa.; Lancaster, Pa.; Reading, Pa.; Schuylkill Haven, Pa.; Selinsgrove, Pa.; York, Pa.; Baltimore, Md.; Washington, D. C.; Kearney, N. J.; Binghamton, N. Y.; and Syracuse, N. Y. Many locations in the general area of these terminals

can receive direct delivery. For other locations where railway express stations are conveniently located we recommend R. E. A. Express delivery for large orders. For most rapid delivery to distant areas in the U. S. A. we recommend air freight; consult your local airline for prices. Because of the many problems associated with overseas shipments we do not accept such orders.

We send a notice of shipment the day your plants are sent. If there should be some delay in their arrival please accept them and examine them carefully. We will make a replacement for any that are not satisfactory or refund the full purchase price. Our plants are carefully packaged to withstand at least 10 days in shipment. If it should be necessary to write about your order please mention the red number which is stamped on the acknowledgment that is sent to you when your order is first received.

How to Choose the Best Strawberry Varieties

Your choice of strawberry varieties depends, to a large extent, on the purpose for which they are to be grown. Some varieties are especially good for fresh eating, while others are quite tart, but good for long-distance shipping. Some are superior for freezing, and others are extra good for preserves. Some varieties will give fine results in nearly any soil, while others require very good growing conditions. Some varieties are resistant to diseases while others are susceptible. Below is a list of general strawberry characteristics when grown under normal conditions. It must be remembered that excess fertility and other conditions can greatly alter strawberry qualities. Thus, we strongly recommend that you try several of the most desirable varieties and decide which ones are best for your particular location. Complete descriptions of all our strawberry varieties are given in this catalog.

CHARACTERISTICS OF SOME STRAWBERRY VARIETIES

BEST FOR FLAVOR AND GENERAL HOME USE: Redglow, Fairfax, Armore, Pocahontas, Sparkle, Midway, Sunrise, Redstar.

BEST FOR LARGE SIZE: Armore, Robinson, Jerseybelle, Catskill, Empire, Pocahontas, Vesper.

BEST FOR HIGH YIELDS: Catskill, Pocahontas, Surecrop, Earlidawn, Midway, Sunrise.

BEST FOR FIRMNESS: Dixieland, Blakemore, Pocahontas, Surecrop, Tennessee Beauty, Earlibelle.

BEST FOR FREEZING: Midland, Pocahontas, Dixieland, Redglow, Sparkle, Surecrop, Earlidawn, Midway, Blakemore, Earlibelle.

BEST FOR PRESERVES AND JAMS: Blakemore, Pocahontas, Tennessee Beauty, Earlibelle.

BEST FOR EARLINESS: Earlidawn, Midland, Premier, Redglow, Sunrise, Earlibelle.

BEST FOR LATENESS: Armore, Sparkle, Jerseybelle, Tennessee Beauty, Redstar, Vesper.

BEST FOR VIGOR AND GROWTH IN POOR OR DRY LAND: Surecrop, Robinson, Premier, Blakemore, Sen. Dunlap, Sunrise.

BEST FOR RESISTANCE TO RED STELE: Surecrop, Redglow, Sparkle, Midway, Sunrise.

BEST FOR RESISTANCE TO VERTICILLIUM WILT: Catskill, Surecrop, Premier, Robinson, Empire, Sunrise.

BEST FOR RESISTANCE TO LEAF TROUBLES: Fairfax, Premier, Midland, Surecrop, Catskill, Empire, Redstar, Tennessee Beauty.

BEST FOR VERY COLD CLIMATES: Sen. Dunlap, Robinson, Catskill, Sparkle, Premier, Midway.

BEST FOR FROST RESISTANCE: Earlidawn, Premier.

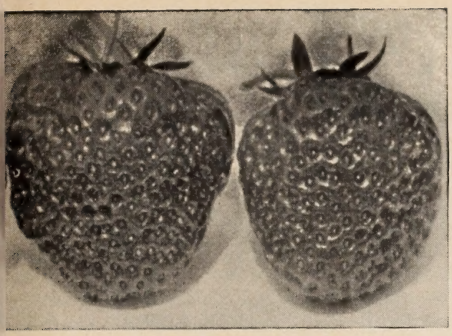
BEST FOR SOUTHERN STATES: Albritton, Pocahontas, Dixieland, Blakemore, Surecrop, Tennessee Beauty, Earlibelle.

BEST FOR FLORIDA: Florida 90.

For success with our plants we hope you will pay close attention to the information on pages 18 and 19. Also our bulletin #21 provides further details concerning strawberry culture. Other issues of our "Better Berries" bulletins include culture of the various plants we sell. A complete set is available by sending 25c to Rayner Bros. Inc., Box 348, Salisbury, Maryland 21801.

NO MATTER HOW MUCH YOU PAY

You will never buy berries as good as the fresh harvests of your own locality. With "shipped-in" berries the quality and flavor cannot match the vine-ripened perfection right out of the patch. That's why more and more folks grow their own. Grow more! Save more! Have more!



EARLIDAWN

NEW LEADER FOR EARLY PROFITS— TREMENDOUSLY PRODUCTIVE—VIRUS-FREE

Earlidawn was introduced in 1956 by the U. S. Department of Agriculture and soon became established as the leading early commercial strawberry in much of the eastern United States. It is a day or two earlier than any other variety and produces tremendous crops of big light red berries that lead the customers right to your door for those early profits. Despite its earliness, Earlidawn has unusual frost resistance and thus is a very dependable producer. Its berries have a nice bright red flesh color which results in a good frozen product or fine preserves. Earlidawn ripens rapidly and uniformly producing lots of big berries that make the rows shine with the beauty of red, ripe fruit.

In poor land or under drought conditions Earlidawn does not grow as well as some varieties but give it good growing conditions and it will truly amaze you with tremendous crops that will yield fine profit. It does not make as many runners as many varieties which results in regular fruiting throughout the bed. Since Earlidawn is not a prolific plant maker the supply is always limited and we have sold out every year since it was introduced. So if you want to get Rayner's registered virus-free plants of this excellent variety be sure to place your order early. For best results do not plant in land recently cropped to potatoes or tomatoes or where verticillium wilt is known to occur.

25 plants $2.50; 50 for $3.75; 100 for $5.60; 1,000 for $25.00. Complete Prices Page 20. Our prices do not include Postage. See Page 21 for Postal Rates.

January 19, 1965

In the spring of 1963 I set 1,700 of Rayner's strawberries, Sparkle, Surecrop, and Earlidawn and picked 7,483 qts. or 4.4 qts. per plant set. MR. MERTON HATCH, Castine, Maine

May 25, 1965

We want to say thanks so much for your interest shown in your plants and your customers. I know there couldn't be another company as great as yours. CLEO C. HOGAN, Park City, Ky.

March 1, 1965

Yours is the only catalog I ever received that gives so much information on the best stock to plant in each locality. MRS. HAZEL VALERIO, Chicago, Ill.

MIDLAND

EXCELLENT QUALITY AND BEAUTY— VERY EARLY—VIRUS-FREE

Throughout the northeastern and central states, this is one of the finest of all strawberries for flavor, quality, and appearance. The berries are very large and have a beautiful deep red color. The flesh is firm and has a fine solid red texture that rates Midland as one of the best of all for freezing. Berries ripen very early and bring top prices, so this is a fine variety for either small or large-scale commercial use. On Long Island virus-free Midland has proven to be an outstanding variety for the high-quality New York market.

We strongly recommend Midland for home gardens and local sales where its excellent quality and fine appearance make it a real favorite. The plants are vigorous and resistant to leaf troubles and do not make too many runners as is the case with some varieties. Give Midland good growing conditions and you will be rewarded with a fine strawberry in all respects. Rayner's registered virus-free stock of Midland will bring the best out of this excellent variety.

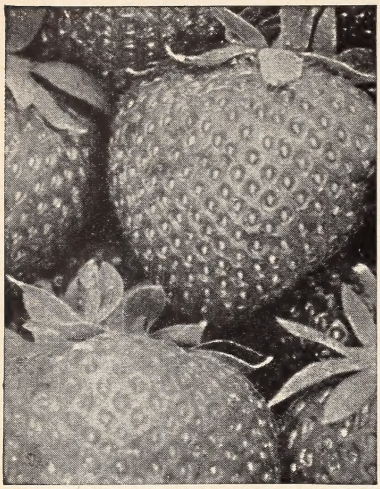
25 Plants $2.50; 50 for $3.75; 100 for $5.60; 1,000 for $25.00. Complete Prices Page 20.

VIRUS FREE

REDGLOW

EXCELLENT FOR FRESH USE AND FREEZING

THE BEST COMBINATION OF FLAVOR, BEAUTY, AND QUALITY



It is our opinion that Redglow is one of the best of all strawberries for flavor and quality. If it is allowed to remain on the plant until it becomes a rich red color, we believe you will agree that this is the flavor you want in a strawberry. In addition to such delicious flavor Redglow is also one of the most beautiful varieties. Its berries are very smooth and uniform and have a brilliant color that is unsurpassed. Redglow averages medium to large in size and has a very nice cap. The flesh is firm and has a fine color, which results in an excellent frozen product. It grows well in most soils but gives best results in rich, moist land. It has red stele resistance, so if this disease is a problem just plant Redglow and enjoy the finest strawberries you have ever known.

For the home garden we believe Redglow is ideal and recommend it highly from north to south. For local sales it is a sure profit maker, for once your customers have become familiar with its fine flavor and quality they will be sure to return. Redglow ripens early with nice crops of the most beautiful, delicious berries you have ever seen. The foliage is vigorous, and runner production is moderate to heavy.

25 Plants $2.25; 50 for $3.45; 100 for $5.00; 1,000 for $22.50. **Complete Prices Page 20.**

COMMERCIAL SHIPPER

DIXIELAND

SUPERIOR FIRMNESS

Although we do not have virus-free Dixieland for sale this year we do have a strain that shows little or none of the "yellows" trouble that has caused a decline of this variety in recent years. Many growers in the south and several northern areas still plant only Dixieland since it is such an outstanding variety for long distance shipment. The berries ripen early and are unusually firm, large, bright and tart in flavor.

Prices: 100 Plants for $4.70; 1,000 for $21.00. **Complete Prices on Page 20.**

PREMIER

U. S. D. A. Virus-Free Strain

THE OLD FAVORITE EARLY BERRY

Premier is such a well-known variety that despite the fact it is surpassed by several other varieties it is still very popular in many areas. It originated in Massachusetts and was introduced in 1918 as Howard-17. Later it was renamed Premier and became one of the most widely grown of all strawberries. It ripens early and is quite frost hardy in cold climates, so that it has long had the reputation of being a very dependable producer of big crops of strawberries. Premier will grow well in most types of soil but is not resistant to the red stele disease. It ripens early, producing attractive light red berries in abundance. In most of the northern states it is generally considered a very dependable variety for home use and local sales. Our planting stock is of the U.S.D.A. strain, which is exceptionally vigorous and a free runner producer. Premier is very resistant to verticillium wilt.

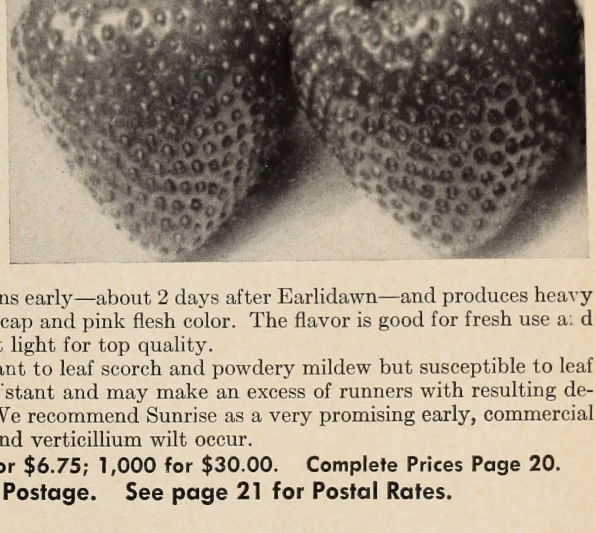
25 Plants for $2.00; 50 for $3.00; 100 for $4.50; 1,000 for $20.00

New

SUNRISE

VIRUS-FREE FROM U. S. D. A.

AMAZINGLY PRODUCTIVE DISEASE RESISTANT



For about 5 years this new variety was tested as Md.-U. S. 2601 in many areas of the U. S. A. In our test plots it has been outstanding for high yields of large, firm, very bright, attractive berries that hold their fine color long after picking. These same features have caused Sunrise to receive excellent reports in official tests from New Jersey to Missouri. It was selected from a cross of U. S. 4152 x Stelemaster and has inherited multiple resistance to the red stele fungus and resistance to verticillium wilt. Sunrise ripens early—about 2 days after Earlidawn—and produces heavy yields of very attractive berries with a fine cap and pink flesh color. The flavor is good for fresh use and preserves but when frozen the color is a bit light for top quality.

Plants of Sunrise are vigorous and resistant to leaf scorch and powdery mildew but susceptible to leaf spot. This variety is also very drought resistant and may make an excess of runners with resulting decrease in fruit production if not thinned. We recommend Sunrise as a very promising early, commercial variety especially in soils where red stele and verticillium wilt occur.

25 Plants $3.00; 50 for $4.55; 100 for $6.75; 1,000 for $30.00. **Complete Prices Page 20.**

Our prices do not include Postage. **See page 21 for Postal Rates.**

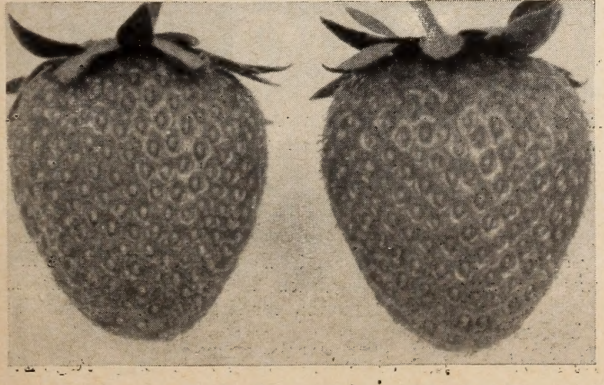
New

EARLIBELLE

EARLY COMMERCIAL VARIETY FOR SOUTHERN AREA. VIRUS-FREE

Earlibelle resulted from the cooperative breeding program of the U. S. Dept. of Agriculture and the North Carolina Agricultural Experiment Station. It was selected from a cross of Albritton x Md.-U. S. 2101 and has been tested since 1956 as N. C. 2486. Earlibelle is best adapted to the area from southern Virginia to Georgia where its early ripening and extreme firmness should make an excellent replacement for Dixieland. In our tests and all other tests Earlibelle has been just as firm as Dixieland and thus should be an excellent shipping variety. The berries are uniform, conic in shape, bright sparkling red in color, and tart in flavor. Yields are very good in the south but decrease sharply in the north. Therefore we advise only trial plantings in the area north of eastern Maryland.

At the Virginia Truck Experiment Station, in Norfolk, Earlibelle was rated as an excellent commercial variety as a result of 3 years testing. Although it is a prolific plant maker it still produced big crops of large, high quality berries.



The outstanding feature of Earlibelle is its firm berries which make it as suitable as Dixieland for long distance shipment. We predict that this variety will become very popular in a large area of the South as an early commercial variety to grow with Albritton, Tennessee Beauty, and other southern varieties.

Plants of Earlibelle are resistant to leaf troubles, small in size, and very vigorous. Rayner's registered virus-free stock of Earlibelle will give the best possible results with this very promising new variety.

Prices: 25 Plants $3.00; 50 for $4.55; 100 for $6.75; 1,000 for $30.00. **See Page 20.**

VIRUS FREE

FAIRFAX

THAT WONDERFUL STRAWBERRY

THE OUTSTANDING VARIETY FOR DELICIOUS FLAVOR

We recommend Fairfax for those who want strawberries with a truly delicious flavor. Since its introduction in 1928 by the U. S. Department of Agriculture, this variety has been a flavor favorite. Many commercial growers have customers who pay a premium price for this delicious berry, and many home gardeners always include it in their planting. Berries of Fairfax become a very deep red color when at their flavor peak, but for freezing the berries of medium red color give better results. Its fruit is medium to large in size, and production is good. Plants of our virus-free Fairfax are quite vigorous and winter hardy throughout the northeastern states. We believe that the sensational flavor of Fairfax makes it one of the very best varieties for home gardens from north to south. Rayner's virus-free plants will give best results.

25 Plants $2.20; 50 for $3.35; 100 for $4.90; 1,000 for $22.00. Complete Prices Page 20.

May 7, 1965

Last year was bad for most berries around here but we follow Rayner's planting instructions and used your superior plants and had an amazing crop. MR. JOHN A. KING, SR., Dover Foxcroft, Me.

VIRUS FREE

BLAKEMORE

DROUGHT RESISTANT

THE BEST FOR PRESERVES AND JAMS—WONDERFUL FOR FREEZING

For many years the excellent processing qualities of Blakemore have made it one of the most important of all strawberry varieties. Its berries are very firm and have an outstanding bright red color. Blakemore is a bit tart for most fresh use, but when sugar is added there is an excellent flavor. These features make Blakemore an outstanding favorite with all who want to make the best jams, jellies, and preserves. The bright sparkling product will prove that Blakemore well deserves its fine reputation in this respect. For freezing it is likewise excellent, since the berries are unusually firm and hold their shape and color very well. When frozen whole, with the caps still on, Blakemore makes a beautiful delicious treat for winter days. This is a very vigorous, early variety and will give good results in all but the coldest states. Rayner's stock of Blakemore is virus-free and yellows-free.

25 Plants $1.90; 50 for $2.85; 1,000 for $19.00. See Page 20 for Complete Price List.

VIRUS FREE

FLORIDA 90

BEST FOR FLORIDA

Because of the lack of cold weather in Florida there is not sufficient winter dormancy for fruit development in most varieties of strawberry. The plants will grow but production of fruit is poor or absent. For many years Missionary was the only variety that would produce good crops under Florida conditions, but in recent years it has been largely replaced by Florida 90, a berry developed in Florida for Florida conditions. This is the berry that is grown so extensively for shipment to the North. Its berries are large and elongate and have a rich red color and nice flavor. The plants are relatively small but very vigorous, making excellent growth on a wide variety of soils. Recently Florida 90 has been found to give fine results in parts of Georgia, where it has excellent commercial possibilities. For the home gardener in Florida, there is no better strawberry than this fine berry which is tailor-made for your climate. Unfortunately this variety is not adapted to northern climates.

25 Plants $1.85; 100 for $4.20; 1,000 for $18.50. Complete Prices Page 20. Postage Page 21.

VIRUS FREE

POCAHONTAS

EXTRA BIG YIELDS OF HIGH QUALITY BERRIES. EXCELLENT FOR BOTH COMMERCIAL AND HOME PLANTINGS.

Pocahontas was introduced by the U. S. Dept. of Agriculture in 1954 and almost immediately became one of the leading varieties for both commercial and home garden production. Such popularity is fully deserved since Pocahontas produces extra big yields of very large, bright, high quality berries that hold their fine appearance long after picking. Thus Pocahontas is a favorite with commercial producers where these features are so important. The excellent quality and large size of Pocahontas, together with fine plant vigor, also make it one of the best for home gardens. It ripens in midseason and yields amazing crops of beautiful berries that "hold their size" during its long harvest period. The berries have a fine bright skin with yellow seeds and a good clear red flesh color. Therefore Pocahontas is fine for freezing and preserves. From New York to Georgia and westward to Texas this variety is still one of the very best and we recommend it highly to all who want big crops of large, fancy berries.

25 Plants for $2.10; 50 for $3.15; 100 for $4.70; 1,000 for $21.00. Complete Prices Page 20.
Our prices do not include Postage. See Page 21 for Postal Rates.

March 3, 1965

My bed of Surecrop, Pocahontas, and Armore has given over 5 years of splendid crops.

COL. S. D. BEDINGER, Dunnsville, Va.

May 8, 1965

This is the 5th year for my planting of Surecrop strawberries obtained from Rayner's. They are still hale and hearty and are full of bloom even with no protection last winter. In all my 70 years I never saw such hardiness.

MR. JOHN R. CRAGO, Jefferson, Pa.

VIRUS FREE

SURECROP

SEE COLOR PHOTO INSIDE FRONT COVER

DISEASE RESISTANT, DROUGHT RESISTANT, UNUSUALLY VIGOROUS

As proof of its superiority Surecrop has again been rated first in "On-The-Farm" variety trials conducted by the University of West Virginia Agricultural Extension Service. Its average yield from 7 locations was 1.37 quarts per plant set or 6,850 qts. per acre. In one planting it produced at the rate of 13,600 qts. per acre. Its fruit was rated large in size, firm in texture, and of good freezing quality. Similar reports are obtained from so many customers in so many locations that we can unhesitatingly recommend Surecrop as a truly remarkable strawberry for both home garden and commercial production.

Surecrop has such vigor that it will often grow in poor or dry land where other strawberries fail. Also it has multiple resistance to the red stele disease as well as resistance to verticillium wilt and other troubles. Because of its vigorous growth it is most important to prevent the fruiting bed from becoming too heavily matted and to avoid any spring application of fertilizer.

This excellent midseason variety has beautiful, firm fruit, with nice flavor and quality. Try Surecrop for one of the finest strawberries you have ever seen. Further information on inside cover.

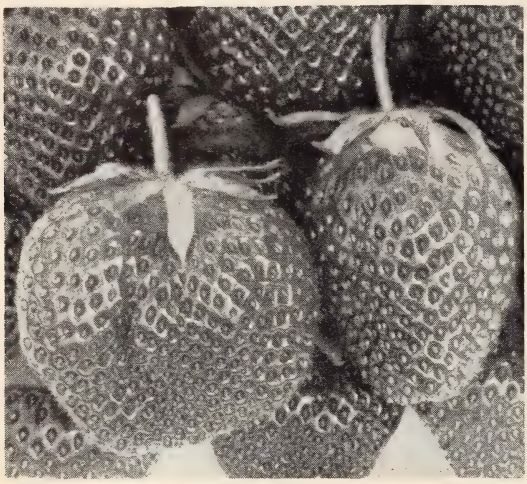
25 Plants $2.00; 50 for $3.00; 100 for $4.50; 1,000 for $20.00. Complete Prices Page 20.

TREMENDOUS YIELDS OF LARGE BERRIES

MIDWAY

VIRUS-FREE
New U. S. D. A. Hybrid

GET YOUR SHARE OF BIG PROFITS FROM THIS NEW COMMERCIAL LEADER. EXCELLENT FLAVOR, FINE FOR FREEZING, RED STELE RESISTANT



Because of its tremendous production of delicious, firm, attractive berries, Midway has had a popularity explosion that causes the demand for plants to far exceed the supply. So if you want good plants of this outstanding variety, be sure to place your order early. Within four years this wonderful berry from the U. S. Department of Agriculture has blazed a trail to the top for both commercial production and home plantings. In Michigan, Ohio, Virginia, West Virginia, Maryland, New Jersey, Pennsylvania, and many other states it has become a sensational favorite. In recent official tests in Iowa, Midway produced at the rate of 15,653 quarts per acre. If you want to grow one of the best of all strawberries, be sure to get Rayner's registered virus-free stock of Midway.

It ripens in early midseason, producing large, bright berries with extra fancy caps and bright yellow seeds. Berries of Midway have a nice uniform shape and hold their large size and fine appearance for the long harvest season. The berries have a firm flesh and firm skin, which permits long-distance shipment and results in a nice-looking berry a day or two after they have been picked. Midway is a delicious berry for fresh use and excellent for freezing and preserves. It has resistance to red stele and is a very good plant maker if conditions are at all favorable.

25 Plants $2.20; 50 for $3.35; 100 for $4.90; 1,000 for $22.00. Complete Prices Page 20.
Prices in this Catalog do not include postage. See page 21 for Postal Rates.

August 10, 1964

The 25 Midway produced over 35 quarts in less than 100 sq. ft. I have never seen a berry with the color, flavor, and smell to match this one. Some of the Vesper berries were 2½ inches in diameter.

Rev. Joel L. Anderson, Grand Marais, Minn.

VIRUS FREE

EMPIRE

EXCELLENT FOR COMMERCIAL AND HOME USE IN THE NORTH

Empire is another of the fine fruit developments of the New York State Experiment Station. Thus, it is well suited to the northern states where it is a fine midseason companion of Catskill. Yields are good, and it has sufficient frost and winter hardiness to be a very dependable producer. Empire is an especially attractive berry since it has a very glossy, medium red color and a fine green cap. The berry shape is somewhat elongate and irregular. Berry size is large, and this size holds up well for the entire picking season. The flesh color of Empire is somewhat pale, and it is a bit soft, but the flavor is very good. Its large size, fine appearance and good flavor rate Empire as a real profit maker in northern states. We definitely believe you will like this excellent variety.

Plants of Empire are very vigorous, winter hardy and resistant to verticillium wilt. Runner plants are developed freely and result in a good fruiting row. In all the New England area, we believe you will have excellent results with Rayner's virus-free Empire.

25 Plants $2.10; 100 for $4.70; 1,000 for $21.00. Order Early. Complete Prices Page 20.

CATSKILL

BIG YIELDS OF BIG BERRIES
OUTSTANDING NORTHERN VARIETY
VIRUS-FREE—WINTER HARDY

This famous berry has long been the leading variety in most of the northeastern United States. It is especially hardy and consistently produces unusually big crops. Berries of Catskill are large, bright in color, and of excellent flavor. They ripen in midseason and are a favorite for local sales and home gardens. Catskill is generally not firm enough for long distance shipment but is excellent for "pick them yourself" plantings. Plants of Catskill are very vigorous and resistant to leaf troubles and verticillium wilt. This variety was introduced by the New York Agricultural Experiment Station in 1933 and still remains a favorite with thousands of growers who like the customers below, praise its bumper crops of big delicious berries. Through Penna. and northward into Canada, Catskill gives fine results in nearly any soil that is reasonably fertile and moist. Rayner's virus-free true-to-name stock assures you of the best possible results with Catskill.

25 Plants $2.15; 50 for $3.25; 100 for $4.80; 1,000 for $21.50. **Complete Prices Page 20.**

January 30, 1965

I have tried a lot of strawberries but Catskill has them all beat. I pick berries that are 2 inches through and my customers really like them.

MR. RAYKOND C. KIRK, Honey Grove, Pa.

May 18, 1965

Your Catskills are unbeatable for this area—very well pleased.

JOHN P. URBAETIS, Mechanicsville, N. Y.

UNUSUALLY VIGOROUS

ROBINSON

VIRUS FREE

Extra Large Berries

Robinson (also known as Kardinal King and Scarlet Beauty) has several outstanding good features that far outweigh its less desirable qualities. It is one of the most vigorous plant makers and will often give good results in poor or sandy soils where other varieties fail. Even under drought conditions it will usually produce good crops. Another fine quality is its very large berry size. Fruits of Robinson are very big, and with their light red color they bring good prices. Its ripening period begins soon after Premier, but it is generally considered a midseason variety. The plants are small but the fruiting beds are very wide and vigorous—in fact, best results are obtained if late-formed runners are removed. Robinson is resistant to verticillium wilt.

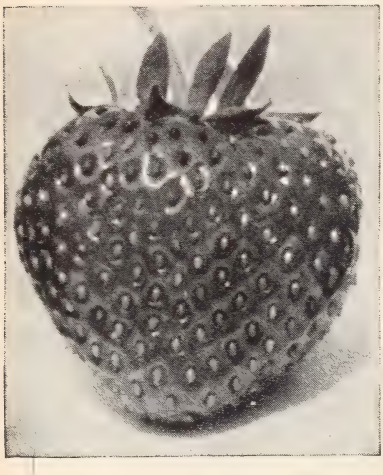
In cool climates the quality and firmness of Robinson is good enough to satisfy most customers. However, in warm areas it may not be suitable. Because of its vigor and large berry size Robinson remains a favorite of many home gardeners and commercial growers in the northeast.

100 Plants for $4.50; 1,000 for $20.00.
Complete Price List on page 20

New

FULTON

VIRUS FREE



From N. Y. Experiment Station

Fulton is another fine variety resulting from the excellent breeding program of the New York Agricultural Experiment Station. It was introduced in 1959 and has subsequently proven to be adapted to most of the northeastern and central states. This variety was introduced primarily for use as a northern commercial variety, since the berries are firmer than most varieties generally adapted to northern conditions. The flesh is firm and the skin is fairly tough, so that the berries have good handling and keeping quality. Fulton ripens about midseason and has good yields of bright, attractive berries. The flavor is good, and freezing quality is also very good. Plants are vigorous, productive, and resistant to leaf troubles. We recommend our registered virus-free stock of Fulton to northern growers who want a high-quality berry with improved firmness, combined with good quality and fine flavor.

Prices: 25 Plants $2.60; 50 for $3.95; 100 for $5.90.

VIRUS FREE

SENATOR DUNLAP

THE OLD-FASHIONED VARIETY WITH WILD STRAWBERRY FLAVOR

Dunlap was named in Illinois in 1890 and has withstood the test of time better than any standard variety. It was a favorite long ago because of its wonderful flavor and excellent quality for fresh use and preserves. Today Senator Dunlap still has these same excellent features and has also proven to be fine for freezing. The plants are extremely winter hardy and will grow in our coldest states. Thus, it is well liked in Minnesota, Wisconsin, North Dakota, South Dakota, and other states having severe winter weather. Dunlap will also grow well in poor soils and in heavy clay soils and is very drought resistant. Berries of Senator Dunlap are of medium size and have a rich red color inside and out. For berries that will bring back memories of that delicious wild strawberry flavor, try Rayner's registered stock of virus-free Dunlap. Place your order early to be sure of obtaining the desired varieties.

25 Plants $1.90; 50 for $2.85; 100 for $4.30; 1,000 for $19.00. **Complete Prices Page 20.**

June 7, 1965

Your Albritton is recommended for North Carolina but here in Buchanan County, Virginia I have already sold 132 gallons from 8 beds 3 ft. x 100 ft. Customers go wild over the size and quality. They hold their large size until the last berry is gone.

MR. BUD HAGY, Vansant, Virginia

VIRUS FREE

ALBRITTON

In the area from southern Virginia through the coastal section of North Carolina this is an excellent late variety. Berries of Albritton are large, bright, very uniform, and of fine quality and flavor. Plants are vigorous but do not become too heavily matted in the rows and thus produce big crops of wonderful firm berries. Unfortunately Albritton is often not sufficiently productive in areas north of Virginia to be a dependable variety. But in a favorable location it is one of the very best for both commercial and home garden production.

25 Plants for $1.85; 50 for $2.75; 100 for $4.20; 1,000 for $18.50. **Complete Prices Page 20.**
Our prices do not include Postage. **See Page 21 for Postal Rates.**

SPARKLE

FAVORITE LATE VARIETY FOR FRESH USE AND FREEZING—VIRUS-FREE

For many years Sparkle has been the most important late strawberry in much of the northeast. It was introduced by the New Jersey Agricultural Experiment Station in 1931 and soon became very popular because of its many outstanding qualities. Sparkle is a very dependable producer of fine crops of glossy, sparkling berries. They are of medium size, have a nice cap, and yellow seeds. Berries of Sparkle have very good flavor and quality and are rated very good for freezing and for preserves. Sparkle generally ripens just after the midseason varieties and is a very important commercial variety north of Maryland. It is very winter hardy, giving good results even in parts of Canada. It is a good plant maker in most types of soil. As an extra feature Sparkle is resistant to red stele and leaf troubles. Plants of Sparkle are naturally quite vigorous, but with Rayner's virus-free stock they have that extra vitality that really makes this a great favorite for both commercial growers and home gardeners. In Michigan there is a variety known as Paymaster that is generally considered to be the same as Sparkle.

25 Plants $2.10; 50 for $3.15; 100 for $4.70; 1,000 for $21.00. **Complete Prices Page 20.**

March 9, 1965

Some years ago we planted 175 of Rayner's Sparkle strawberry plants and despite a bad frost picked 375 quarts.

Mrs. R. C. Judd, Norwich, N. J.

March 8, 1965

In 1963 we ordered 300 strawberry plants and picked 558 quarts which we think was wonderful.

Mrs. John Medley, Sugar Grove, Va.

TENN. BEAUTY

VIRUS FREE

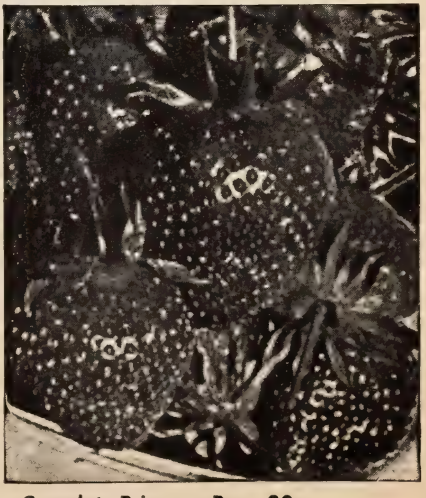
LATE COMMERCIAL VARIETY FOR SOUTH-CENTRAL STATES FINE FOR FREEZING AND PRESERVES

Tennessee Beauty is recommended as a commercial variety in south-central and eastern states, where its firmness is a definite advantage. Many growers tell us that it is their best producer.

The berries are of medium size and have a bright, rich red color. The flavor is good, and the slight tartness results in fine quality. For freezing and preserving Tennessee Beauty rates high since it produces a fine bright product. One feature of this variety that is desirable for processing is the ease with which the cap comes off. With its many fine features such as good quality, firmness, beauty, and high production, Tennessee Beauty is definitely a good variety for both commercial and home plantings.

Although we do not recommend large-scale planting of Tennessee Beauty in the northern states, it is considered a good commercial variety in some sections.

Tennessee Beauty usually is very vigorous, producing thickly matted fruiting beds. For best yield and quality some type of runner control should be practiced.

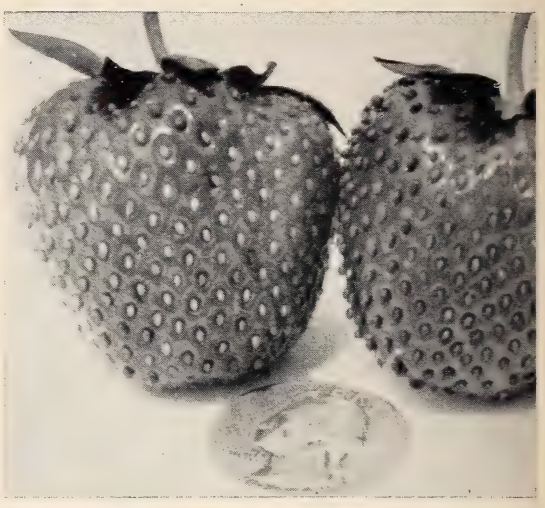


Prices: 100 Plants for $4.50; 1,000 for $20.00. **Complete Prices on Page 20.**

VIRUS-FREE
BIG PROFITS

JERSEYBELLE

HUGE, BEAUTIFUL BERRIES—LATE—VERY PRODUCTIVE



If you want big strawberries, then you want Jerseybelle. For several years these exceptionally large, beautiful berries have been a sensation in the Hammonton, New Jersey area where they are grown for the New York market. Jerseybelle has consistently brought higher prices than any other variety and has rapidly become the leading berry in that area. Recently virus-free stock of Jerseybelle became available, and it has resulted in a tremendous improvement in this variety. Now Jerseybelle has excellent plant vigor and will give fine results in most soils.

Berries of Jerseybelle have consistently been the largest of any variety we have ever seen, and they have a beautiful glossy color that gives a waxed appearance. The cap is large and the seeds are bright yellow, resulting in a berry of unusual beauty. The flesh is not nearly as juicy as in some varieties, thus Jerseybelle will hold its appearance quite well. The flavor is not as good as for some berries but is satisfactory. The ripening season is quite late, about a week after Sparkle, which greatly helps to prolong the picking season.

Jerseybelle may show some leaf troubles but generally this is not a serious problem. In northern soils, it is best not to plant Jerseybelle in land recently grown to tomatoes, potatoes, or other strawberries. But if you are looking for that extra big berry that will make real profits, you will make a planting of Rayner's registered, virus-free Jerseybelle.

25 Plants $2.20; 50 for $3.35; 100 for $4.90; 1,000 for $22.00. **Complete Prices on Page 20.**

June 21, 1965

Last year we ordered 250 of Rayner's Jerseybelle and they really are everything the book says. We are picking now and have some as large as hen eggs.

MR. HAROLD B. MOORE, Cumberland, Ohio

ARMORE

EXTRA LARGE BERRIES
LATE—EXTRA FINE FLAVOR
VIRUS-FREE

This large, late berry was introduced in Missouri in 1950 and has become popular throughout most of the south-central and mid-Atlantic area and into New England. Its best features are extra large fruit size, very heavy yields, and fine flavor. These qualities make Armore an excellent variety for local sales and "pick them yourself" operations. Because of its sweet flavor it is also very popular with home gardeners. Foliage of Armore is more susceptible to leaf troubles than some varieties, but it has so much vigor that a good fruiting row usually results. In many respects the berries of Armore resemble Catskill, and northern growers can use it very well to extend the season as it usually ripens after Catskill. Since large berries are always in demand, it appears that Armore will remain a favorite since it ranks near the top in this respect.

Rayner's virus-free stock of Armore will give the very best results.

25 Plants $2.00; 50 for $3.00; 1,000 for $20.00. **See Page 20 for Complete Price List.**

EXTRA LARGE
VERY LATE

VESPER

VIRUS
FREE

Vesper, which was tested as New Jersey selection No. 157, provides strawberry growers with the biggest and one of the latest of all strawberries. This variety is truly amazing because of its huge berries, which are as large as any variety we know. It is much like Jerseybelle in most respects, which it now displaces as champion for berry size. For lateness it is about as late as Redstar, which is generally considered to be the latest of all June bearing strawberries. Foliage of Vesper is generally vigorous but like Jerseybelle is a bit more susceptible to leaf troubles than some varieties. But with proper growing conditions Vesper can be one of the most remarkable strawberries you have ever seen.

The unusually late ripening of this variety is additional reason why it can be a real profit maker, since you will still have fine berries after other strawberries are gone. Be sure to try at least a few of this amazing new variety that will show you and your friends just how big a strawberry can be.

25 Plants $2.50; 50 for $3.75; 100 for $5.60; 1,000 for $25.00. Complete Prices Page 20. Our prices do not include Postage. See page 21 for Postal Rates.

January 18, 1965

In spite of dry weather we had the best berry crop in this area in 1964. We had 5000 of your plants including Surecrop, Pocahontas, Midway, Vesper, and Earlidawn.

MR. GEORGE J. HUBER, Bradshaw, Md.

June 20, 1965

I think that Vesper is the best strawberry that money can buy. Customers say that they are the best and sweetest berry they have ever eaten.

MR. PAUL PHILLIPS, Elkton, Va.

June 18, 1965

Enclosed is a newspaper photo showing a quart basket which is filled with 14 Vesper berries from plants purchased last year from Rayner Bros. We never saw such big berries in our life.

MR. & MRS. LUTHER TOMS, Myersville, Md.

REDSTAR

VIRUS
FREE

LARGE EXTRA-LATE

The big feature of Redstar is its unusual lateness. It ripens a week or more after the normal late varieties. Thus, Redstar is very popular with both home gardeners and commercial producers who want to extend the berry season as long as possible. Another advantage of this lateness is that Redstar rarely is hurt by frost and thus is a dependable producer.

Redstar does best in fertile soil where it will make a nice bed of unusually large plants. The fruit is large, attractive, and has a very big cap that makes Redstar a beautiful berry. Flavor and quality are good, and it makes a nice frozen product.

Rayner's registered stock of virus-free Redstar has resulted in a great increase in popularity of this fine variety. It still requires good growing conditions for best results, but now Redstar is much more dependable. In any of the northern areas where a very late strawberry is desired, we believe that Redstar will be very satisfactory.

25 Plants $2.25; 50 for $3.45; 100 for $5.00; 1,000 for $22.50. Complete Prices Page 20. Prices in this catalog do not include Postage. See page 21.

EVERBEARING STRAWBERRIES

PICK DELICIOUS STRAWBERRIES SPRING, SUMMER AND FALL

SUPERFECTION

VIRUS-FREE

Superfection is our most dependable everbearer. It is a vigorous grower and readily produces good fruiting rows. This variety is also known as Gem and Brilliant.

The berries can be very large and quite attractive. The color is a good light red, and the flavor ranges from mild to tart. Superfection is not as good as the June-bearing varieties, but it will give you a fair amount of nice berries in June and July and another crop in the early fall that will continue until freezing weather. Fine for home gardens.

25 Plants $3.50; 100 for $7.90.

Prices in this catalog do not include Postage. **See page 21 for Postal Rates.**

March 16, 1965

I picked blossoms off my everbearers for about 50 days and then quit and had berries the rest of the summer.

MR. PAUL YAPLE, Newbury, Ohio

February 3, 1965

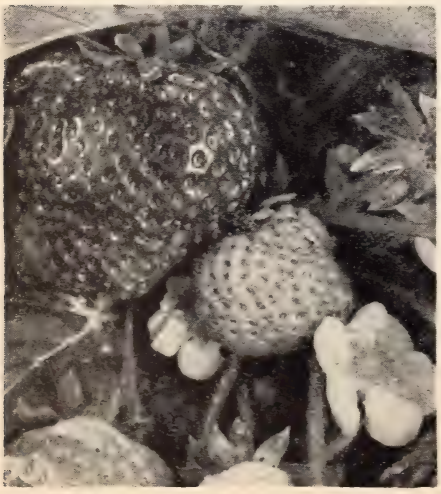
We consider the information in your Better Berries bulletins as being a great help to berry growers and esteem it to be an unexcelled service to your customers.

MR. C. W. SAGE, St. Louis, Missouri

March 8, 1965

I have bought many thousands of plants from your company and have always had excellent service and plants.

MR. EDWARD DANIELS, Westerlo, N. Y.



STREAMLINER

VIRUS-FREE EVERBEARER

FINE FLAVOR, GOOD YIELDS, LARGE SIZE

In many areas of the central and mid-southern states, Streamliner is the outstanding everbearer. It has very vigorous, beautiful foliage, and produces an abundance of runner plants under most growing conditions. Berries of Streamliner are of good size and have a fine appearance and a good flavor. A good crop is produced in the spring, but best production is in the fall when you can really appreciate this fine variety. For fresh use and freezing it is quite good, and thus Streamliner is rapidly increasing in popularity not only in the South but in northern states as well. This excellent everbearer is certainly worth a trial if you want a fall-bearing strawberry.

25 Plants $3.50; 50 for $5.25; 100 for $7.90. **Complete Price List Page 20.**

New

OZARK BEAUTY

EVERBEARER

VIRUS-FREE VIGOR—AMAZINGLY PRODUCTIVE—VERY HARDY

See Inside Back Cover for Further Details

The season of 1965 really proved the merit of Ozark Beauty over any other everbearer we have ever seen. It produced loads of big beautiful berries that were very attractive and had excellent flavor. Many of the berries were as large as those of the best June-bearing varieties and the yield was truly amazing. Foliage of Ozark Beauty is vigorous and tall and there is good runner production. In addition to a big spring crop this variety yields lots of fine, big berries during late summer and fall. Much of the fall crop is produced by the mother plants set in the spring.

In our opinion Ozark Beauty is King of the Everbearers and Rayner's virus-free stock will give the best possible results. See color photo and other details on inside back cover.

25 Plants $3.90; 50 for $5.85; 100 for $8.80. Complete Price List Page 20.

Prices in this catalog do not include Postage. See page 21 for Postal Rates.

A SUGGESTION FOR BETTER BERRIES FROM A SUCCESSFUL GROWER

Mr. Lawrence Vogel, of Media, Penna. tells us that he cuts the leaves off his beds of Robinson strawberries at the beginning of the harvest season. He says this results in much better fruit production and less berry rot. It sounds like a good idea and we believe it would apply to any heavily bedded rows.

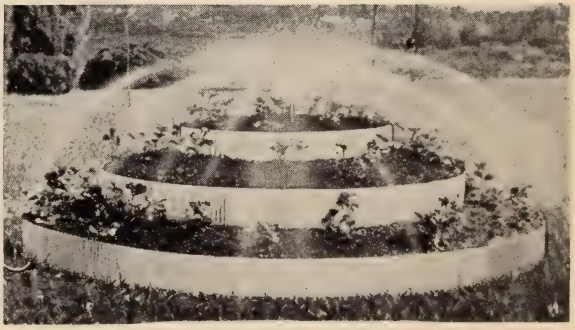
BERRY TERRACE

50 feet of row in a 6-foot space

IDEAL FOR SMALL YARDS

The Terrace is made of aluminum that holds its beauty for years. It will accommodate 50 Everbearing strawberry plants. The ease of watering and fertilizing enables much more production of fruit than would normally be realized. The beauty of foliage and blossoms and the harvest of berries from spring to frost will provide a constant delight.

You may prefer to grow one or two of the excellent June-bearing varieties in your pyramid. Do not remove the blossoms but cut off the runners and you will have excellent berries 60 days or less after planting. Pocahontas, Catskill, Redglow, or Fairfax should give excellent results in a terrace. The second season they would be at their best, producing almost 1 quart of fine berries per plant.



NEW MODEL PYRAMID

Consists of three attractive corrugated aluminum bands with a base diameter of 6 feet. Complete with sprinkler system ready for attachment to your garden hose.

BERRY TERRACE COMPLETE $7.95 Shipping Weight, 7 lbs.

ACCESSORIES FOR PYRAMID

Cover (plastic) makes small greenhouse (wt. 1 lb.)	$4.95
Support Strips (for cover) (wt. 4 lbs.)	$3.30
Net (for bird protection) (wt. 1 lb.)	$6.35

Growing Strawberries

Strawberries are one of the easiest crops to grow. Good plants set at the proper season in good soil will thrive with ordinary care and cultivation. There is nothing complicated about growing strawberries, and by following these easy instructions the beginner can be sure of good results. Rayner's registered virus-free stock is further assurance of success.

Where strawberries can be grown: In every state of the Union strawberries are grown at least to some extent. They are quite hardy and will give good results in any reasonably fertile soil that has good moisture. Like other fruit, strawberries require almost full sunlight for good fruit production.

Soil and fertilizer: A good soil for strawberries is one that is slightly acid, in good condition, and reasonably free of weed seed. Newly plowed pasture land or sod may give poor results, but recently cleared woodland is excellent. If good soil is properly prepared, it can be successfully replanted to strawberries a year after an old planting was plowed up. Important requirements for strawberries are high organic matter and high fertility. Well-rotted barnyard manure is one of the best materials for good strawberry growth but other organic matter is very helpful. Well-rotted poultry manure can be used. Many growers plow under about 500 lbs. of complete fertilizer two or three weeks before planting, but if the soil contains a good supply of manure this is not necessary.

Use of a good soluble fertilizer at time of planting is recommended. It will not burn the plants and can be safely used at any time during the growing season.

Strawberries have a high requirement for nitrogen, but it must be applied at the proper time or else very adverse effects may result. Fruit buds, which determine the spring crop, are developed in the plant during August and September. Therefore, this is the most important time to apply fertilizer. Most successful growers apply about 500 lbs. per acre of a 10-6-4, 8-8-8, or similar fertilizer at this time. This is equal to about 1 lb. per 80 sq. ft. of strawberry bed. The fertilizer should be spread directly on the plants when dry and then brushed off the leaves. If applied when the leaves are wet, injury may result.

An excellent organic plant food for strawberries and nearly all other plants is cottonseed meal. It is obtained entirely from ground cottonseed and is thus entirely organic in nature. Usually it contains about 6% nitrogen, 3% phosphoric acid, and 2% potash plus other important elements. Thus, cottonseed meal is a perfect plant food for those who follow the highly commendable practices of organic gardening. It is usually used at the rate of 4 lbs. per 25 ft. of strawberry row and will cause no injury or damage to the plants. It should be applied once in early spring, again in midsummer.

In general, it is best not to apply fertilizer during the spring on fruiting beds. This can cause excess plant growth, reduced fruit production, and poorer quality. We believe this is one of the most common causes of poor strawberry yields and recommend that fruiting beds should not be fertilized in the spring.

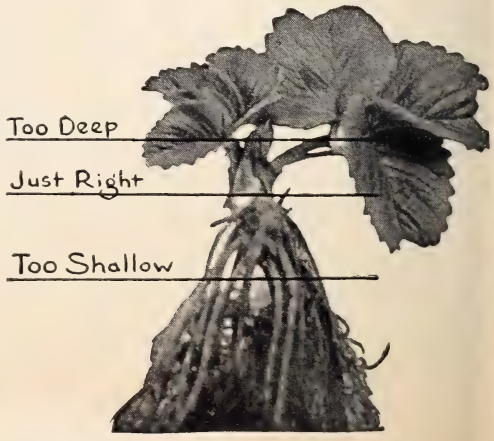
When to plant: Early spring is usually the best time to plant strawberries. In northern states it is best to wait until May or even June when the soil is in good condition. Frost or snow will not harm newly planted strawberries. *With Rayner's dormant plants, there is a definite trend to summer planting where irrigation is available. This gives a less crowded plant bed which yields unusually heavy crops of very large berries.* In cold climates we do not recommend planting after mid-July. Fall plantings are sometimes successful but are often damaged or completely destroyed by winter injury.

How to plant: It is important not to set the plant too deep or too shallow—see photo below. Do not clip the roots but spread them out full length and press soil around the plant so that the roots are firmly anchored in the soil. About a pint of water or soluble fertilizer solution should be poured around each plant when it is put in the hole. A good planting distance is 2 ft. apart in the row, with 4 ft. between rows. Slightly narrow fruiting beds will usually have better yields and higher quality than beds that are unusually thick. There are usually two extra plants per bunch, so set the extras at a row end and use if replacements are needed.

Plants Required Per Acre

Plants required per acre at various planting distances:

Rows	Distance in Row	Plants per Acre
3½ ft. apart	18 in.	8,325
3½ ft. apart	24 in.	6,225
3½ ft. apart	30 in.	5,000
4 ft. apart	15 in.	8,750
4 ft. apart	18 in.	7,300
4 ft. apart	24 in.	5,425
4 ft. apart	30 in.	4,375



STRAWBERRY CULTURE

(Continued from page 18)

Care of the plants: A few weeks after the strawberries are planted they will produce blossoms. For the regular matted-row system it is best to remove these blooms since the plants will make better growth. Hoeing and cultivation are necessary practices for weed control, but much benefit can be obtained by use of a good weed-killer. We recommend that you consult your state agricultural authorities for recommendations. We use geese in our fields for weed control; about three per acre will do a good job on young grass.

In northern states it is important to mulch strawberries for prevention of winter injury. Straw, hay, or marsh grass are the best materials. It should be applied in the fall when the temperature first reaches 20°F and used so as to cover the plants to a depth of 3 to 4 in. About three to six tons of hay or straw per acre is needed. As soon as new strawberry leaves begin to grow in the spring, the mulch should be removed so that only about an inch remains. The rest should be kept between the beds where it will help keep the berries clean and free of rot. Even in the South many berries are mulched to help keep them free of dirt and decay.

Control of diseases and insects: Two soil diseases: red stele and verticillium wilt, sometimes damage strawberries. On page 4 there is a list of resistant varieties. In our No. 17 issue of "Better Berries" we have a chart showing control of diseases and insects. And in our No. 21 issue there is a full summary of strawberry culture. Write to Rayner Bros. Inc., Salisbury, Maryland 21801.

For further details concerning strawberries contact your county agricultural agent or write to your state agricultural extension service.

RAYNER'S PROVEN PLANTING SYSTEM GIVES YOU DELICIOUS RIPE STRAWBERRIES WITHIN 60 DAYS AFTER PLANTING

The usual and most reliable method of growing strawberries is to remove the blossoms that are produced the same season the plants are set. For large plantings this is the best method, since it gives better stands of plants if growing conditions are unfavorable.

But with the new virus-free vigor of Rayner's registered strawberry plants it is now possible to leave the blossoms on the newly set plants and to harvest big delicious berries within six to eight weeks after planting. We recommend this method only for those who are willing to take the small amount of extra care that is necessary. But if you will follow the method described below, we feel certain that you will be rewarded with a fine yield of beautiful berries within 60 days after planting and that you will be truly amazed at the yield and size of berries the second season.

1. Select a piece of well-drained soil that receives full sunlight. During the fall or early spring, make a heavy application of organic matter. Well-rotted stable manure is preferred, but chicken manure is also good. Compost, sawdust, and peat are also satisfactory, but if they are used some type of fertilizer would be helpful. For each bushel use 8 oz. of ammonium nitrate or 1 lb. 5-10-5 or similar fertilizer. This material should be mixed thoroughly into the soil at least two weeks before planting. Plant as early as possible in the spring and no later than June 15. This method is not recommended for strawberries set after this date.

2. Set the plants about 18 in. apart in the row and have 3 ft. between rows. Make a hole for each plant so that the roots can be fully extended and spread outward slightly. Pour about 1 pt. of soluble fertilizer around each plant, and press the soil firmly around it so that the roots are fully covered but no soil is on the bud.

3. Each week during the growing season strawberries require about 2 in. of water. If this is not received by rainfall, it should be applied.

4. About 25 to 30 days after planting, the plants will produce blossoms. Do not remove these blossoms since in another 25 to 30 days they will develop into delicious ripe strawberries.

5. Runner plants will develop from the original plants during the summer and fall. Allow each plant to form no more than six plants, and keep the rest removed. This will involve some extra work but is well worth the effort. This results in a spaced fruiting bed for the next season that will give tremendous yields of unusually large berries. If the regular type of matted fruiting bed is preferred, there is no need for runner control but yield and size are generally less in matted rows than in spaced rows.

6. In mid-August spread a complete fertilizer such as 10-6-4 directly on the plants when they are dry. Use about 1 lb. per 60 ft. of row and brush it off the leaves to prevent burning. A foliar fertilizer or any type of well-rotted manure could also be used.

7. During the winter a mulch of about 2 in. of straw should be placed over the plants when the temperature first reaches 20°F. This should be lightly raked to the row middles in early spring where it will help to keep the berries clean. If frost threatens the blossoms, it can be spread on the plants and removed after the danger of frost has passed.

8. Nearly any variety of strawberry can be used for this method but the plants should have the virus-free vigor provided by Rayner's registered stock.

In northern states it is best to plant varieties resistant to verticillium wilt in land where tomatoes and potatoes have recently been grown. Some excellent resistant varieties are Surecrop, Catskill, Premier, Robinson, Empire and Sunrise.

V.F. "Plants referred to as "virus-free" in this catalog have been field grown by us from virus-free foundation stock furnished by the U. S. Department of Agriculture Bureau of Plant Industry, Soils and Agricultural Engineering, Beltsville, Maryland, and State Horticultural Department, University of Maryland. Our field-grown stock has been dusted with parathion to control aphids which transmit the virus diseases. It has also been grown at considerable distance from any other strawberry plants. Since viruses do not produce clear-cut symptoms in most strawberry varieties, but simply weaken and devitalize the plants, no guarantee can be made that these plants are 100 percent free of viruses. Because of the measures that we have used to protect these plants from virus infection, we believe them to be substantially virus-free."

INSTRUCTIONS TO PURCHASERS

TIME TO ORDER—As soon as convenient after receiving this catalog. Late in the season we may be out of some varieties, but if you order early, plants will be reserved until you are ready for them. Be sure to PLANT EARLY!

TIME OF SHIPMENT—From November 1st to July 15th. All orders filled after July 15th will be at purchaser's risk. We recommend special handling for most rapid postal service. See parcel post rates for further details.

PAYMENT—Money Order or Personal Check with order, or if desired ¼ payment and balance before date of shipment.

REFERENCES—Union Trust Co., Maryland National Bank, Salisbury, Md., Dun & Bradstreet, your own State Experiment Station or Country Agent.

GUARANTEE—100% satisfaction or your money back. Claims if any, must be made within 30 days after receipt of goods. After 30 days and within 1 year we will replace at ½ the original purchase price. We cannot be responsible for conditions over which we have no control. At no time will we be responsible for any sum greater than that paid for the stock.

TRUE-TO-NAME—We use every precaution to have our plants true-to-name. Should any prove otherwise we will replace them or refund the purchase price.

SHIPMENT—Express is generally cheaper on 2000 plants or more beyond the third zone and on all large orders.

PARCEL POST—On all orders under 2000 Parcel Post is generally cheaper. Be sure to send enough postage to save C.O.D. charges for balance. Any excess postage will be returned.

BUY RAYNER'S PLANTS AND YOU BUY THE BEST

HOW TO FIGURE PARCEL POST RATES

Locate the zone number for your state from the list shown below. Determine the approximate weight of all plants ordered from information on this page. Then find the cost of mailing this weight to your zone and add this amount to your payment for the plants. If too much is sent for postage it will be refunded; if not enough we will request it after shipment. If there is more than $2.00 unpaid postage we will send C.O.D. for balance. For most rapid delivery of plants by mail we recommend the Special Handling service of the U. S. Post Office Dept. described below. We also deliver by United Parcel Service to their eastern area. On orders of more than 5,000 strawberry plants or bundles of large trees railway express delivery is usually necessary. See page 3 for further details concerning shipment. Please use the enclosed Order Sheet and Envelope. Send your order early so that we can reserve your plants—payment can be made any time before plants are shipped. See back of Order Sheet for further details.

We will notify you by first-class mail the day your order is shipped. Be on the alert for your plants so there will be no delay in receiving them. Rayner's plants are guaranteed to arrive in good condition.

CERTIFIED RASPBERRY PLANTS

This is the dependable certified stock which has been state inspected for freedom from insects and diseases and which has been proven dependable by many years of profitable production by thousands of commercial growers and home gardeners.

BLACK RASPBERRIES

LOGAN is a fine early black raspberry, ripening about a week before Cumberland and producing fine crops of beautiful, high quality berries. Very hardy and vigorous.

BRISTOL is a fine midseason black raspberry with large, round, firm berries of very good quality. It is very vigorous, winter hardy, and produces big crops.

CUMBERLAND ripens in midseason and gives big yields of beautiful black raspberries of unsurpassed flavor and quality. Its plants are vigorous, hardy and adapted to various soils.

MORRISON is a late black raspberry ripening about a week after Cumberland and producing big crops of very large, firm, glossy berries. It ships well and keeps well. Plants of Morrison are large, vigorous, and hardy.

RED RASPBERRIES

LATHAM is the standard red raspberry for most of the eastern states. Its plants are hardy, producing big crops of large, high-quality fruit, fine for fresh use, freezing, or preserves. Latham is fine for home gardens and excellent for commercial plantings, for its berries hold up well for shipment. It is hardy in our coldest climates and very late in ripening.

TAYLOR usually ripens considerably earlier than Latham and because of its very large, delicious berries is rapidly increasing in popularity. It is very hardy and has heavy yields of firm berries which are excellent for freezing. Taylor is recommended both for home plantings and commercial use.

SEPTEMBER EVERBEARING RED RASPBERRY is from the New York Experiment Station. It is truly an outstanding variety, producing a wonderful crop of high-quality, early berries during the regular summer season and another fine crop that begins to ripen early in the fall. September is a real winner for home use where its firm berries, which are free from crumbling, are especially nice for freezing.

Prices of certified 1-Yr. #1 plants of Latham, Taylor, September, Bristol, Cumberland, Logan, and Morrison. These prices do not include postage (see page 21).

Blackberries

New! DARROW

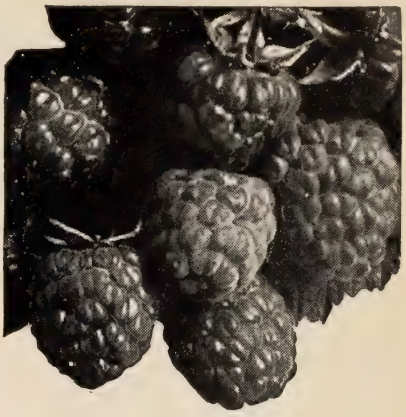
Unquestionably the finest of all blackberries. This new introduction of the New York Experiment Station has very heavy production of delicious, large, firm berries that are about 1 in. long and ¾ in. wide. Plants are very vigorous and especially winter hardy. Darrow has proven to be outstanding for dependable early production.

1-Yr. #1 plants, 3 for $2.25; 6 for $4.25; 12 for $6.30; 25 for $9.95; 50 for $17.25; 100 for $31.90; 500 for $145.00. Prices do not include postage (see page 21).

Now! Substantially Virus-Free Raspberry Plants

As a result of research by the United States Department of Agriculture and the University of Maryland a program for production of substantially virus-free raspberry plants has been developed. Last year we were the first nursery to offer this stock to the public and this year an increased supply is available. These plants have been propagated from virus-free foundation stock and maintained substantially virus-free by a special program of isolation, spraying, and inspection. To obtain the full benefit of this virus-free vigor these plants should be separated from other brambles by at least 200 ft. and a recommended program for control of aphids should be followed.

Because of the many extra procedures necessary to produce this special stock, their cost is more than for regular certified plants but we believe that the resulting increase in vigor, production, and quality will far outweigh the difference in price.



VIRUS-FREE RED RASPBERRIES

LATHAM is the most widely grown red raspberry since it is a very dependable producer in such cold climates as Minnesota and North Dakota as well as the southern raspberry area. This variety yields big crops of large, firm berries with a delicious flavor. It ripens very late and thus provides berries long after the regular season. Latham has long been a standard commercial and home variety.

NEWBURGH is an excellent early-midseason red raspberry that is excellent for commercial production because it produces fine crops of very large, very firm attractive berries of good quality. It has vigorous, hardy plants of medium height and is less subject to mosaic infection than most red varieties. It is important to cut back the canes at spring pruning in order to allow proper fruit development.

TAYLOR is a late red raspberry that produces big crops of the most beautiful raspberries you have ever seen. Its berries are very large and long in shape and are especially attractive. They are firm in texture and have fine quality. The plants are so sturdy that they usually do not need support.

VIRUS-FREE BLACK RASPBERRIES

PLUM FARMER is an early black raspberry from Ohio that has long been a favorite because of its vigor, drought resistance and fine crops of large, bright, firm berries. The crop ripens rapidly and uniformly so that it can all be harvested in two or three pickings. One of the hardiest black raspberries.

DUNDEE is an excellent midseason black raspberry that is very popular for home or commercial use. Big crops of very large, glossy, firm berries that have a fine sweet flavor and excellent quality. Plants are tall, vigorous, with good winter hardiness and are adapted to a wide range of growing conditions.

PRICES FOR SUBSTANTIALLY VIRUS-FREE 1-yr. #1 plants of LATHAM, NEWBURGH, TAYLOR, PLUM FARMER, AND DUNDEE RASPBERRY PLANTS. AVAILABLE IN SPRING ONLY. 3 for $1.90; 6 for $3.30; 12 for $5.70; 25 for $9.65; 50 for $17.75; 100 for $32.95. These prices do not include postage (see page 21). See planting instructions sent with each order and Rayner's Bulletin No. 14 for raspberry culture.

New! BLACK BEAUTY EVERBEARING BLACK RASPBERRY

For years we have been searching for an everbearing black raspberry and finally have the pleasure of offering the outstanding Black Beauty variety. Its berries are big, bright, and delicious. A fine crop is produced in early summer, and if new canes are not cut back it will ripen another big crop before frost. Black Beauty is wonderful for home gardens.

Price of sturdy #1 plants of Black Beauty

3 for $1.95; 6 for $3.40; 12 for $5.95; 25 for $9.75; 50 for $17.95; 100 for $33.00

THORNLESS BOYSENBERRY

A delicious berry combining the flavor of raspberries and blackberries. Completely thornless. Not hardy in northern states. **1-yr. #1 plants: 3 for $1.35; 6 for $2.15; 10 for $2.75; 25 for $4.95; 50 for $9.25.**

Grapes

THE OUTSTANDING EASTERN VARIETIES

CONCORD—The Best Blue

This is the variety with true grape flavor that has been a favorite for over 100 years. From New England through Missouri this is the leading variety for home garden and commercial planting. Concord has vigorous, productive vines and ripens late in the season.

CACO—The Best Red

A midseason red grape of large size and good quality. Excellent for home gardens throughout the Concord area. Vines of Caco are very hardy and vigorous.

NIAGARA—The Best White

This excellent variety produces beautiful white to amber grapes with a juicy, sweet quality. Niagara is a vigorous, hardy variety ripening in midseason. Excellent for home gardens.

FREDONIA—The Best Black

Fredonia is one of the most delicious of all grapes. Its big, black fruit is produced in large, beautiful clusters. Fredonia ripens about two weeks earlier than Concord and is generally more productive and vigorous.

PRICES OF CONCORD, NIAGARA CACO, FREDONIA

2-Yr. #1 Plants, Extra Large

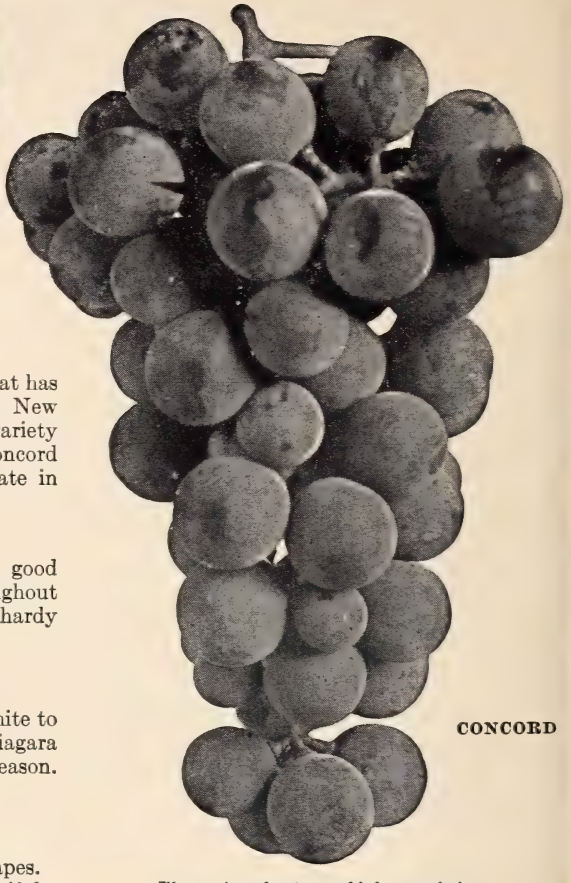
$1.00 each; 3 for $2.75; 10 for $8.00; 25 for $17.50, plus postage (see page 21).

New! INTERLAKEN

SEEDLESS GRAPE

This excellent introduction of the New York Experiment Station provides the eastern grape grower with a high-quality, seedless variety. Clusters are of good size and well filled with rich, golden fruit. The flesh is meaty and crisp and the flavor is very sweet. Interlaken seedless ripens about a month before Concord. The vines are vigorous and hardy to about 20° below zero.

2-Yr. #1 plants: $1.50 each; 3 for $4.25



CONCORD

Illustration about two-thirds actual size

GRAPES ARE EASY TO GROW AND LAST FOR YEARS

Grape vines may be planted in early spring or in the fall in November and December. Grapes should be set in a well-drained soil that would produce garden crops.

Vines are usually planted 8 to 10 ft. apart in the home garden, and where a vineyard is planned the rows should be 10 ft. apart with vines 4 to 5 ft. apart in the row. Grapes may be trained along a garden fence, or a regular arbor may be constructed to suit the desired arrangement in the garden.

A simple method of support is followed by commercial growers. Wires are strung from posts with top wire 5 ft. above the ground and the lower wire 2½ ft. above the ground.

Pruning is one of the most important factors in obtaining marvelous grape harvests. Our Better Berries Bulletin No. 3 completely outlines most popular pruning methods; other information is given in Bulletin No. 14.

COMPLETE PLANTING INSTRUCTIONS also will be sent with your order.

TENDER, FRESH

ASPARAGUS

From Your Own Plantings Year After Year

The best eastern variety for home and commercial planting is the disease-resistant MARY WASHINGTON. We sell only the famous Robert's strain, which is the best asparagus money can buy. It produces shoots of finest quality, more uniform in size, shape and color than others.

50 to 100 roots supply an average family. 200 roots will take care of canning and freezing needs, too.

A planting of Rayner's asparagus will yield loads of fine food for many years. Plant early in the spring in fertile soil to which about 5 lbs. of 10-6-4 fertilizer per 100 sq. ft. has been added. Spread the roots in a trench about 6 in. deep and 8 in. wide. Place plants about 16 in. apart and cover crowns with about 2 in. of soil. As plants begin to make new growth, gradually fill the trench.

Write for Rayner's Bulletin No. 18 giving full details of Asparagus culture.

ASPARAGUS PRICES—ORDER EARLY FOR SPRING PLANTING

	6 plants	12	25	50	100	250	500	1000
1-Yr. #1 Roots	$0.75	$1.35	$2.50	$3.75	$ 5.65	$10.95	$17.25	$27.50
2-Yr. #1 Roots	1.25	2.25	4.00	6.00	10.95	16.25	27.75	45.00
3-Yr. Jumbo Roots	1.95	3.40	6.00	9.00	13.50	26.50	43.50	75.00

Big 3-Yr. Roots will produce some stalks large enough for cutting the second year.
These prices do not include postage. **See page 21 for Postal Rates.**

VICTORIA RHUBARB

For those who want vigorous, seedling rhubarb roots we recommend the well-known Victoria variety. These whole roots will soon become established and produce lots of long, tender, pink stalks that are excellent for home use. Gives best results in cool climates and in fertile, deep soil with a uniform supply of moisture. Prices of Victoria Rhubarb:

Strong 1-yr. whole roots, 1 to 1½ in. diameter: 5 for $1.50; 10 for $2.50. Shipping weight 1 lb. for 5 roots.

HORSERADISH

This is the old-fashioned Maliner Kren variety that is very vigorous and develops such large firm roots. Grows best in moist, cool soils of reasonable fertility. If you like horseradish, you will surely want to try this excellent variety. A few roots will soon develop into a fine bed that will last for years.

Vigorous whole roots about 6 to 8 in. long: 5 for $1.45; 10 for $2.45. Shipping weight 1 lb. for 5 roots.

MacDonald RED

RHUBARB

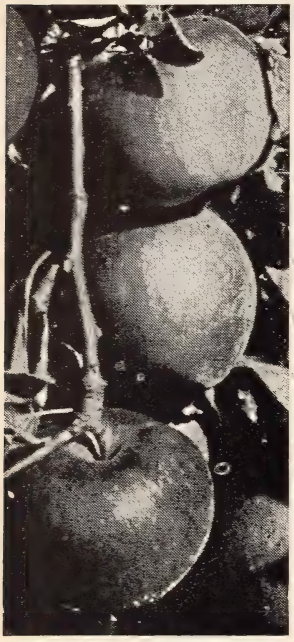
RHUBARB is a very popular perennial where winters are sufficiently cold to freeze ground 3 to 4 in. A few plants well tended make an excellent supply for sauce and pies.

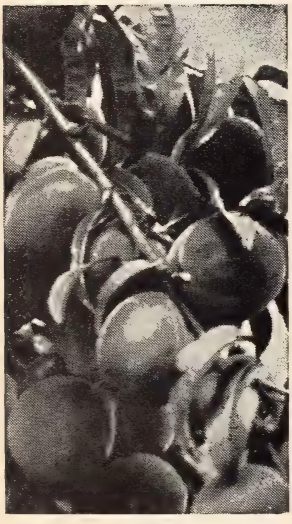
We offer the MacDonald Red variety because of its marked superiority. Matures earlier, sweeter, and one planting lasts a lifetime. Plant in spring, 3 to 4 ft. apart. Rhubarb culture is given in Bulletin No. 18.

Prices for Large, Vigorous Divisions $1.00 each; 3 for $2.70; 10 for $8.00

RAYNER'S Dependable

FRUIT TREES





For best results with most fruit trees plant at least two varieties for pollination.

APPLE TREES

WINESAP, IMPROVED STRAIN. Beautiful deep red color. Vigorous, hardy, productive, early bearing. Rich flavor. Crisp, tender apples of long-keeping quality.

GRIMES GOLDEN. A vigorous producer of excellent fall apples. Big, golden yellow, tender, crisp apple of fancy dessert quality.

GOLDEN DELICIOUS. Heavy yielding, early bearing. Bright golden yellow, crisp, juicy apples. National favorite.

RED McINTOSH. A leading commercial variety. Fancy red apples with white, tender flesh of high quality and aroma. Tree very hardy and vigorous.

RED DELICIOUS. Large apples of rich red color and excellent flavor and aroma. Uniform fruit. Tree very hardy. Great favorite with home gardeners as well as orchardists.

PEACH TREES

GOLDEN JUBILEE. An unusually hardy tree unequaled for production of early yellow freestone peaches of exceptional quality. One of the most dependable for home gardens.

HALE HAVEN. A deep crimson freestone peach. Flesh is golden yellow, firm and of unusually good flavor. Strong, thrifty. Midseason. One of the best for processing.

BELLE OF GEORGIA. Considered the best of white-fleshed peaches. Large size, freestone. Delicious flavor. Midseason.

ELBERTA. This variety is most widely planted because it is adaptable to a wide range of soils and climates. Most popular market peach. Beautifully colored, firm, juicy, yellow flesh. Ripens late.

PRICES OF ABOVE APPLE AND PEACH TREES	
3 to 4 ft., PARCEL POST SIZE	4 to 5 ft., EXPRESS SHIPMENT SIZE
$2.50 each	$3.00 each
10 to 49 trees, $1.75 ea.	10 to 49 trees, $2.50 ea.
These prices do not include shipment.	See page 21 for Postal Rates.

All of our trees are shipped "full length" but if notified we will prune them to proper planting length (see below). Up to five Express size trees can be pruned to meet Parcel Post mailing regulations. More than five Express size trees must be sent by Railway Express. See page 3 for details of our Guarantee.

HOW TO PLANT AND GROW RAYNER'S HARDY FRUIT TREES

Below the Mason-Dixon Line fall is generally considered the best time to plant fruit trees, but in northern states there is too much danger of winter injury so spring planting is recommended. We do not guarantee nursery stock planted in the fall in northern states.

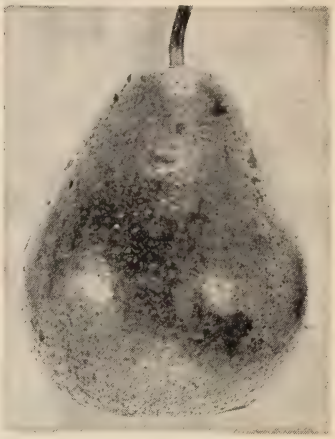
A hole should be dug that is slightly deeper and wider than the root system. Place fertile top soil in the bottom of the hole so that the upper roots will be about 2 in. below the surface. Next add more soil to fill in the hole, packing it firmly around the roots and adding water. Be sure to eliminate air pockets around the roots. Plant at least two varieties of most fruit for proper pollination.

Apples, cherries, and pears should be pruned to a main stem with two or three side branches, while peaches should be cut back to a single stem about 2 ft. tall. Maintain a heavy mulch of sawdust or other organic matter around each tree and wrap the lower stem with fine-mesh wire if there is danger of rabbit injury. In early spring apply manure or complete fertilizer such as 10-6-4 or 8-8-8. Use ½ lb. on young trees and 3 to 4 lbs. on older trees. Write for Rayner's No. 16 Bulletin describing culture of fruit trees. Obtain spraying information from your State Agricultural Extension Service or County Agent.

New! MOONGLOW PEAR

HIGH RESISTANCE TO FIRE BLIGHT

As an aid to American Fruit Growers the U. S. Department of Agriculture has developed Moonglow and Magness, both of which appear to have sufficient blight resistance to enable them to be grown throughout the eastern pear area. Moonglow is a large, high-quality pear that ripens about two weeks before Bartlett. It is good for fresh use as well as processing and storage. Moonglow is a good pollen producer and will set fruit when pollinated by nearly any other pear. Trees are vigorous and upright.



MOONGLOW
Courtesy U. S. Dept. Agriculture

New! MAGNESS PEAR

EXTREMELY BLIGHT RESISTANT. FROM U. S. DEPT. AGRICULTURE

Magness has very high blight resistance and is very vigorous, with a spreading shape. It produces big crops of medium size pears with a soft, sweet flesh that is almost free of grit cells. It ripens about a week after Bartlett and can be held in cold storage up to three months with fine quality. Magness does not produce good pollen, so cannot pollinate other pears. It will set good fruit with pollen from most other pears.

PRICES FOR Sturdy, Well-rooted, Grafted Trees (2 yr., 3 to 4-ft. Size) of new MOONGLOW and MAGNESS PEARS, $3.25 each; 3 for $8.85, plus postage.

Standard Pear Varieties

BARTLETT. Old favorite pear considered best for home garden and market throughout the northern half of the country. Large, golden fruit with excellent flavor.

KIEFFER. A long-time favorite in eastern states because of its high resistance to blight. A vigorous, tall-growing tree, producing loads of huge yellow pears. Extremely winter hardy.

SECKEL. A small, blight resistant pear of unusual delicious flavor. Very winter hardy.

PRICES FOR BARTLETT, KIEFFER, and SECKEL PEARS
Sturdy Grafted Trees (2 yr., 3 to 4 ft.), $2.95 each; 3 for $8.25

NEW! HARDY APRICOTS FROM MINNESOTA

Imagine apricots so hardy they thrive in the cold climate of Minnesota. These two new varieties were released by the Minnesota Agricultural Experiment Station in 1961 and have proven their ability to produce fine crops of delicious, beautiful apricots in an area with winter temperatures down to 30° below zero. **MOONGOLD** and **SUNGOLD** produce trees about 10 to 12 ft. tall and are ideal for home gardens. Both varieties should be planted for proper pollination.

PRICE OF 2 TREES (2 to 3-ft. size): One **MOONGOLD** and one **SUNGOLD, $7.25** plus postage.

Montmorency SOUR CHERRY

For commercial plantings as well as home use Montmorency is by far the leading variety of sour cherry. The fruits are large, firm, and have a beautiful bright red color. Fruit first ripens in early July and can be kept on the tree about a month. This variety is self-fertile. Rayner's stock of Montmorency is of the excellent virus-free strain that is exceptionally vigorous and productive.

Well-rooted 2-yr. trees, 3 to 4 ft. tall, $2.95 each.

Grafted JAPANESE PERSIMMON

From southern Pennsylvania southward these beautiful trees with amazingly large different fruit are wonderful for the home garden. Vigorous and early bearing, **Eureka** is an especially productive variety with big orange fruit having a new delicious flavor when ripe. Deep green, glossy leaves have fine ornamental value. **Tanenashi** produces large yellow to red fruits which are excellent when fully ripe.

Plant both varieties for best pollination.

2 to 3-ft. trees, $2.95 each. Price of 2 trees (1 of each variety) $5.50.

Prices in this Catalog do not include postage. **See page 21 for Postal Rates.**

DWARF FRUIT TREES

ORNAMENTAL—PRODUCTIVE—SAVE VALUABLE GARDEN SPACE

Trees Are Small, Yet Fruit Is Of Regular Size And Quality

No longer just a special feature of exclusive gardens, dwarf fruit trees are now available to all, and at reasonable prices. These wonderful space-saving trees are produced by budding or grafting regular varieties on special dwarfing rootstocks. Apples are usually dwarfed by use of the Malling root systems, and Quince rootstocks produce dwarf pears. Peaches are budded to special dwarfing root systems. Even though the trees remain much smaller, the fruit is of full size and quality. One outstanding feature of dwarf trees is that they begin to bear fruit when only three or four years old. Just the thing for home gardens where space is so valuable. Write for Rayner's Bulletin No. 16 on Culture of Dwarf Trees.

Dwarf Apple Trees

Sturdy trees on the fully dwarfing Malling IX rootstock. Trees grow to about 8 ft. tall.

McINTOSH. Especially suited to Northeast. Big, attractive, red apples with crisp, white flesh. Tender and juicy. Very winter hardy.

WINESAP. Long-time favorite red apple with sweet, juicy flesh. Very vigorous and winter hardy.

GOLDEN DELICIOUS. The queen of apples for beauty and flavor. Big golden apples of superior quality and unsurpassed flavor.

RED DELICIOUS. The national favorite. Large, bright red apples of outstanding beauty and flavor. Very vigorous and productive.

Prices of 2-yr. branched dwarf apples 3 ft. up, $3.25 each; 3 trees for $8.75
These prices do not include postage.

Dwarf Peach Trees

One of the most attractive ornamental trees in the spring when it is loaded with beautiful pink blossoms. Then in the summer you will harvest an abundance of delicious, full-size fruit. These trees usually reach 8 to 10 ft. at maturity and begin to bear in two to three years. See page 26 for variety descriptions.

GOLDEN JUBILEE (Early)
BELLE OF GEORGIA (Midseason)
HALE HAVEN (Midseason)
ELBERTA (Late)

3 to 4 ft. branched trees, $3.15 each; 3 for $8.45, plus postage.
See page 21 for Postal Rates.

Dwarf Cherry Trees

EXCELLENT FOR FRESH USE AND ALL TYPES OF PROCESSING

NORTH STAR is a naturally dwarf hybrid reaching 6 to 8 ft. Very hardy and easy to grow. Fruit is of good size, dark red when ripe and has tart, juicy flesh with a small stone. Very productive. A fine tree for home gardens and small orchards.

METEOR is more upright than North Star but a definite dwarf. Fruit is tart in flavor, clear red in color and large size. Trees are strong and vigorous, hardy, and disease resistant. For best production, plant two varieties to insure proper pollination.

Well-rooted trees, 2 to 3 ft. tall, $2.45 each; 2 trees (one of each variety) $4.40, plus postage.

Dwarf Pear Trees

Grafted to dependable Quince dwarfing stock. Trees grow to about 12 ft. Plant two or more varieties for pollination.

CLAPP'S FAVORITE. A large yellow, early pear of exceptionally fine flavor and quality. Trees are very hardy and productive.

SECKEL. Delicious, small pears. Vigorous and blight resistant. An excellent variety.

BARTLETT. Top quality, very productive. For areas where fire blight is not severe.

DEVOE. (Plant Pat. No. 728). Large, elongate fruit with crisp white sweet flesh and good keeping quality. Trees upright and vigorous.

Prices of Dwarf Pear Trees:
3 ft. up, $3.50 each; 3 trees for $9.25
Plus Postage. **See page 21 for Rates.**

Dwarf Plums

STANLEY. An excellent, very popular prune-plum for both home and commercial planting. Trees are vigorous and self fertile producing tremendous crops of large, purple plums with a golden flesh that is unexcelled for flavor when fully ripe. Ripens in early September in the New England area.

FELLENBERG. This old favorite variety is also known as German prune or Italian prune. It is self-fruitful and very hardy, producing big crops of large, purple, freestone plums with a firm, sweet, delicious flesh. Excellent for fresh use, market sales, and processing. Ripens in September.

ABUNDANCE. This is a fine Oriental-type plum which is a favorite for home gardens. It is a dependable producer of big crops of bright red, beautiful plums having a yellow, tender flesh of unusually fine flavor. Trees of Abundance are vigorous, hardy, and begin to bear early.

BURBANK. A fine Oriental variety to plant in combination with Abundance. Its large deep red fruits are firm in texture and very good for marketing. Trees of Burbank are very vigorous and adapted to a wide range of climates. Requires another Oriental plum for proper pollination.

Prices of well-rooted Dwarf Plum Trees: 2 yr., 2 to 3-ft. size, $3.60 each; four trees (1 of each variety) $13.25, plus postage.

January 5, 1965

Three years ago I purchased from Rayner's 4 dwarf fruit trees and this summer I reaped the first harvest. The quality and size was most gratifying.

Mr. G. E. Leatherman, Williamsport, Md.

Fruit Bowl Special

2 **DWARF APPLE TREES**—Your choice of 2 varieties from preceding page.

2 **DWARF PLUM TREES**—Your choice of 2 varieties listed above.

Total of 8 Dwarf Fruit Trees.

Regular Price $27.00. Special Fruit Bowl Price $23.95, plus postage.

RAYNER'S DEPENDABLE

NUT TREES

BOUNTIFUL HARVESTS

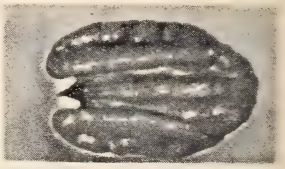
We Finally Have a Supply of Good Hardy Pecans!

For many years we have been trying to obtain enough of these trees to list them in our catalog. Difficulties of grafting have prevented this, but now we have a limited supply. So order early if you want these hard-to-get northern-type pecans. These trees will produce dependable crops at least to the 40th latitude (approximately from Philadelphia, Pa. to Springfield, Ill.). The trees are hardy much farther north than this and rapidly develop into beautiful ornamental and shade specimens. Plant at least two varieties for cross-pollination. Write for Rayner's Bulletin No. 18, which includes culture of nut trees. There are no finer shade trees than the magnificent pecan.

MAJOR Northern Type Pecan

With respect to climate there are two main groups of pecans. The northern type will mature a crop within 175 to 225 days of growing temperature, while the southern pecans require up to 300 days. Major is one of the best of the northern type and will produce excellent crops as far north as any pecan. Thus it is one of the most dependable of all pecans for those who want to grow this fine crop near the northern range for pecans. Nuts of Major are of medium size and have excellent flavor and quality. The shell is thin and kernels are plump. Trees of Major are very hardy and vigorous and begin to bear within four to five years. It is a good pollinator for other varieties.

BUSSERON Northern Type Pecan



This is another of the northern type pecans. It will produce excellent crops in many areas where pecans have never been considered to be reliable. Nuts of Busseron are of medium size and have a fine rich flavor and good cracking quality. It is an early-ripening type and a good pollinating variety for other pecans. Busseron originated in Illinois about 1908 and has made a good reputation as a fine pecan for extension of the northern limit of this wonderful crop.

GILES Northern Type Pecan

Giles is one of the heaviest producing of the northern pecans, with one report of 125 lbs. of nuts from an 18-year-old tree. It originated in Kansas and is generally considered to be a very dependable producer with good tree vigor. Nuts of Giles are of average size, easy to crack and have excellent flavor. Trees begin to bear in three to five years and rapidly attain a beautiful shape that has much ornamental and shade value.

Prices of Major, Giles and Busseron Pecans:

STURDY GRAFTED TREES . . . . . 2 to 3-ft. size $4.95 each; 3 for $14.10

STURDY GRAFTED TREES . . . . . 3 to 4-ft. size $5.95 each; 3 for $16.95

These Prices Do Not Include Postage. **See page 21 for Postal Rates.**

SOUTHERN TYPE PECANS

For the area from Virginia to northern Florida and westward to Texas the southern pecans have great commercial value and are excellent for home plantings. They are among the finest of all trees for shade and beauty. We offer two fine varieties, **STUART** and **DESIRABLE**, and recommend that both be planted for proper pollination. **Two sturdy grafted trees (2 to 3 ft.), one of each variety: $7.95, plus postage.**

BUTTERNUT

Cornell University Bulletin No. 701 lists this as the hardiest of northern nuts. It is fast growing and makes a nice shade tree with loads of elongate nuts having a fine mild flavor.

2 to 3-ft. Seedling Trees . . . $1.95 each

HEARTNUT

Another hardy nut tree for cold climates. This is a type of Japanese walnut with smooth, good quality nuts of very nice flavor. Excellent for shade.

2 to 3-ft. Seedling Trees . . . $2.55 each

EXCELLENT FOR SHADE

NUT TREES

DELICIOUS FLAVOR

FAST GROWING, EARLY PRODUCING

Chinese Chestnut

HARDY, BLIGHT RESISTANT

Here is the most popular of all nut trees. In a short time it becomes one of the most beautiful trees on your place, and you will look forward to each fall harvest of delicious nuts.

Chinese chestnuts are highly resistant to the blight disease, very hardy, and will produce excellent crops of large nuts when only a few years old. The trees are vigorous and have a spreading shape that makes them fine for shade as well as for their crop. Plant two or more trees for cross-pollination. These are vigorous seedlings selected from highly productive trees. Be sure to include postage with order.

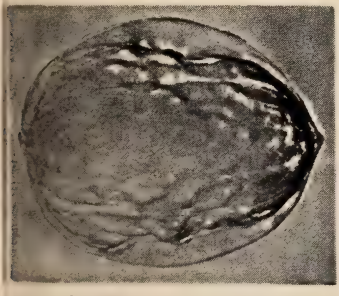
Parcel Post Size	Express Shipment Sizes
2 to 3 ft. $1.60 each	4 to 5 ft. $2.95 each
10 to 49 trees: $1.40 each	10 to 49 trees: $2.75 each
50 or more: $1.25 each	50 or more: $2.60 each

Write for Bulletin No. 18 on Nut Tree Culture

CARPATHIAN ENGLISH WALNUT

Mature Trees Are Hardy to 40° Below Zero

This is the exceptionally hardy Persian or English walnut that has become so popular in most of the northern states. Mature trees are said to be hardy to 40° below zero and still produce big crops of large, thin-shelled, meaty nuts. The trees are very vigorous and have a nice spreading shape which is ideal for shade and ornamental beauty. A deep, fertile soil with a good supply of moisture gives best results.



CARPATHIAN WALNUT

These vigorous seedling trees are very dependable for consistent yields as far north as Minnesota. For good crops it is best to have two or more trees for proper pollination. Vigorous, well-rooted, seedling trees.

2 to 3-ft. size, $3.25 each; 3 for $9.00, plus postage

American Filbert

(Hazelnut)

A small, attractive nut tree commonly known as HAZELNUT. A good dependable type commonly planted in northeastern states. Use two or more varieties for cross-pollination.

2 to 3-ft. trees, $1.95 each

Barcelona Filbert

Because of its high yields of large nuts Barcelona is an important commercial filbert in Oregon and Washington. It is also a fine variety for the northeastern area.

2 to 3-ft. trees, $2.95 each

Du Chilly Filbert

Du Chilly is another popular filbert with dependable production of large nuts. It appears to be a good pollinating variety for other filberts.

2 to 3-ft. trees, $2.95 each

THOMAS BLACK WALNUT

These sturdy grafted trees are the best black walnuts available. Very vigorous, giving good yields of large meaty nuts into central New York. Grows best in deep, well-drained soil. Use another black walnut for cross-pollination.

2 to 3-ft. size: $3.85 each; 3 for $9.00, plus postage

HALL'S HARDY ALMOND

These favorite nut trees are closely related to peaches and require about the same climate. They also produce a similar type of tree with beautiful pink blossoms and will begin to bear in three to four years. Plant two or more for cross-pollination.

Sturdy 3 to 4-ft. trees: $2.75 each; 3 for $7.50. **See Postal Rates, page 21.**

RAYNER'S QUALITY

TREES AND SHRUBS

YOU CAN REALLY SAVE WITH YOUNG TREES AND BE SURE OF GOOD RESULTS

Japanese Yews (Taxus)

Yews are among the finest of all evergreens for landscape planting. Their deep green foliage adds charm and value to any home. Easily kept to any shape by regular shearing; grows well in sun or shade and in any well-drained soil. Plant upright type at corners and other locations where height is desired, and spreaders under windows or other locations where a plant of broad, low shape is required. Be sure to specify upright or spreader when ordering.

Prices of sturdy well-rooted plants: 2 yr. 10 to 12 in., $1.00 each; 3 for $2.75
Prices in this catalog do not include postage. See page 21 for Postal Rates.

Cherokee Princess White Dogwood

A beautiful companion to the Cherokee Chief red dogwood described inside the back cover. This fine tree produces large, pure white flowers in great abundance. Trees are very vigorous, early blooming, and have an excellent branching habit. Hardy in most of the New England area. **Sturdy well-rooted trees 24 to 30 in. tall, $3.85 each, plus postage.**

Amur River Privet

A hedge plant completely winter hardy in the coldest states. Plants grow rapidly to make a fine hedge or windbreak. Leaves are small, dark green and very attractive. **Vigorous, well-rooted plants 12 to 18 inches tall with 3 or more stems, 6 for $1.50; 12 for $2.50; 25 for $4.50; 50 for $8.25; 100 for $15.25, plus postage.**

Rhododendrons

These magnificent evergreens are among the finest of flowering shrubs. Rhododendrons give best results in shady locations where the soil is acid and there is a good supply of moisture. Soil preparation is the same as described in this catalog for blueberries. This is a hybrid seedling, so we cannot specify color but they are generally shades of pink. Hardy in all but the coldest states. **10 to 12-in. plants, $1.65 each; 3 for $4.25. See page 21 for Postal Rates.**

Weeping Willow

For graceful beauty the weeping willow is outstanding. In most of the New England states, west to the Mississippi, and in the South it is a favorite for planting near river and stream banks, but also gives good results in dry land. This is the old-fashioned strain of willow that is so easy to grow and is very hardy. **3 to 4-ft. trees, $1.25 each; 3 for $3.00; 5 to 6-ft. trees, $2.25 each; 3 for $5.50. Plus Postage.**

WINTER HARDY

AZALEAS

RAYNER'S SELECTION OF FINE VARIETIES PROVEN ESPECIALLY HARDY

HINOCRIMSON. Brilliant red blossoms; hardy compact plant. Excellent foliage.
STEWARTSTONIAN. A fine orange-red Gable hybrid. Vigorous upright growth.
DELAWARE VALLEY WHITE. Large white flowers, fairly tall and spreading.
CAROL. Gable hybrid, with pink, double blooms; low, compact growth habit.
OLD FAITHFUL. Beautiful light orchid flowers; vigorous upright growth.

Field-grown, 3 yr. plants, 8 to 12 in. tall, $1.50 each; 3 for $4.25, plus postage.
For Good Results with Azaleas Follow Blueberry Culture and Plant in Shade.

Protects Your Property with an Impenetrable Thorny Barrier. Excellent Bird and Game Cover.

Multiflora Rose

The primary use for Multiflora rose is to provide a protective barrier around fields and property lines of farms, estates, and other rural areas. After a few years this vigorous, thorny rose will make an almost impenetrable barrier that is a true living fence. It lasts a lifetime and needs no repairs. It will fence in farm animals and keep out trespassers. Very popular for conservation use to prevent land erosion. Multiflora rose grows well in nearly any soil type and is suitable for all but the most northern areas. Produces small white blossoms followed by clusters of red berries.

PRICE LIST: Vigorous 12 to 18-in. Plants

25 plants	$2.25	100 plants	$ 7.50
50 plants	4.15	500 plants	30.00

See Page 21 for Postal Rates

Evergreen Seedlings

Rayner's pines and spruces are excellent for Christmas tree plantings. Seedlings that cost only a few pennies now will soon be worth dollars. Make poor land or hillsides produce a real profit. Ideal for erosion control, windbreaks, and hedges. For ornamental use plant in a nursery bed and soon you will have ideal specimen trees for your own use and for sale.

SCOTCH PINE

This is one of the best trees for Christmas plantings since it grows very fast and will reach saleable size in five years. Grows well in dry or moist soil and makes a nicely shaped tree with very little shearing. Our special French strain Scotch pines have a very nice blue-green color which holds well in coldest weather. Excellent for ornamental use.

AUSTRIAN PINE

Another popular tree for Christmas plantings or ornamental use. Will grow well in nearly any soil from sand to clay and will tolerate industrial smoke and fumes that kill other pines. Needles are dark green and quite stiff. Develops into nice bushy saleable tree in about seven years.

DOUGLAS FIR

This has long been a favorite tree for Christmas plantings since it has a naturally compact type of growth. With relatively little shearing it will produce high-grade trees. Needles of Douglas fir are short and have a blue-green color. Best results are obtained in soils that are not too heavy or poorly drained. Our trees are of the special San Isabel, Colorado, strain that is the best of all Douglas fir.

WHITE PINE

One of the most beautiful of all trees with soft, slender needles having a fine light green color. White pines grow well in nearly any soil type and will give good results in poorly drained land where most other pines will not grow. For Christmas trees shearing is necessary, but in six years an excellent compact tree can be produced.

NORWAY SPRUCE

Norway spruce has long been a favorite specimen tree in northern gardens where its stately beauty cannot be excelled. But as a Christmas tree it is also outstanding since with reasonable shearing it will produce fine compact trees with a nice pyramidal shape. Prefers moist soils rather than dry land and will make a nice tree in about eight years.

COLORADO BLUE SPRUCE

A truly magnificent tree with an outstandingly different blue-green color. In contrast with other evergreens this blue spruce is most unusual and thus is highly prized for its ornamental value. This beautiful color likewise makes it a very desirable tree for Christmas use, bringing top prices. Gives good results in moist, fertile soil and requires relatively little shearing.

CANADIAN HEMLOCK

For graceful beauty the hemlock cannot be excelled. It produces short, dark green needles which give its long drooping boughs an almost feathery appearance. Only on large parks and estates should it be allowed to develop into its full magnificent size. But in restricted areas Canadian hemlock can be easily pruned to form a fine hedge, an excellent background or sheared specimen trees. Hemlocks are very easy to grow and do well in sun or shade.

Rayner's FAMOUS BLUEBERRIES

Giant Berries Big as Nickels, Picked from Our 100-Acre Fruiting Field

HERE ARE THOSE AMAZING EXTRA LARGE HYBRIDS

BERKELEY

MILD SWEET **BERKELEY** MOST BEAUTIFUL

This is our selection for the best of all home garden blueberries. It ripens in midseason, producing large, loose clusters of the biggest, most beautiful blueberries you have ever seen. Unlike some varieties, the flavor is good almost as soon as the berry turns blue. Plants of Berkeley are very vigorous and have an excellent semi-spreading shape and usually a heavy main stem. The leaves are very large and very attractive in summer and fall. For all but the most northern states, we strongly recommend Berkeley as an outstanding blueberry.

BLUECROP

HEAVY PRODUCER **BLUECROP** WINTER HARDY

This excellent midseason variety is another of the outstanding introductions of the U. S. Department of Agriculture. Within just a few years Bluecrop has rapidly gained an outstanding reputation as one of the best of all blueberries for commercial production. It is very winter and frost hardy and can be grown in most of the northern states. Berries are large and maintain their size through the long picking season. Yields are very heavy and quality is good. The plants are fairly upright and have a tendency to develop several stems from the ground.

This past winter was unusually severe, causing direct cold injury to blueberries in some areas. In addition there were several frosts in late May which severely reduced the crop of some varieties. But Bluecrop proved its real value by coming through with a tremendous crop of excellent berries. This is undoubtedly one of the finest of all blueberries.

GROWERS' FAVORITE

BLUERAY

EXTRA VIGOROUS

This early variety includes as parents such fine old varieties as Jersey, Pioneer, Stanley, and June and is closely related to Bluecrop. It was released in 1955 by the U. S. D. A. and the New Jersey Agricultural Experiment Station. Since then it has gained rapid acceptance as a commercial berry because of its unusual vigor and tremendous yields of large berries. Blueray has good winter hardiness, giving fine results in Michigan and the New England states.

February 18, 1965

My blueberry plants arrived in good condition and they are beautiful.

MRS. MARTIN C. BONAR, Glendora, Calif.

BLUERAY

New!

COLLINS

WONDERFUL FLAVOR

In 1959 this variety was released by the U.S.D.A. and the New Jersey Experiment Station. It is a cross between Stanley and Weymouth and ripens midway between Earliblue and Bluecrop. Berries are large, firm, light blue in color, and have a mild sweet flavor. Collins appears to have excellent prospects as a home garden berry because of its fine flavor, excellent quality, and dependable production. Plants are reasonably hardy and should give good results in most of the New England and central states.

November 10, 1964

The blueberry plants you shipped to us arrived in perfect shape and were so carefully packaged.

MRS. A. C. JEREMIAH, Seattle, Wash.

EXTRA LATE

COVILLE

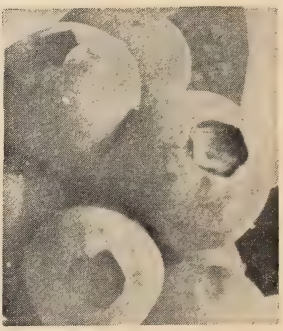
BIG BERRIES

This very late-ripening variety greatly prolongs the blueberry season. Under our conditions we begin to pick Earliblue about June 10 and Coville in early July. Berries are large and very attractive and continue to ripen for several weeks. Good flavor does not usually develop in Coville until after the berries have fully ripened, but allow them to remain for a week after turning blue and the quality can be very good.

April 26, 1965

Two years ago I bought some of Rayner's blueberry plants and they are beautiful. I picked quite a few quarts last year.

MR. WILLARD TEMPLETON, Westfield, Mass.



COVILLE

VERY EARLY

EARLIBLUE

FINE QUALITY

This excellent commercial berry is about as early as Weymouth and has many fine commercial features. The berries are large and ripen uniformly in big, tight clusters. The picking scar is good and berries are resistant to cracking. Of special interest to home gardeners is the mild sweet flavor of Earliblue. Plants are vigorous and have fine upright growth. This variety has good cold resistance and has proven to be a fine berry for both commercial and home use.

EARLIBLUE

HERBERT

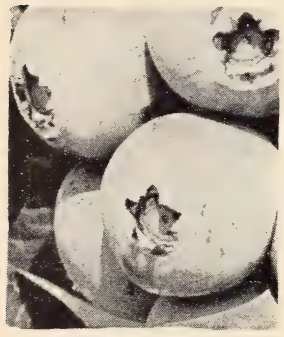
VERY HARDY **HERBERT** BIG AND LATE

Herbert is very different in appearance from most blueberries since its fruit has a shiny black luster and a flattened shape. These extra large berries ripen late in the season in loose clusters and have very good quality. Bushes are vigorous and produce heavy crops. Of much importance is the winter hardiness which permits Herbert to be grown in most of the northern states. It is a good variety for home gardeners since it combines winter hardiness, large berry size, good production, and fine quality.

May 25, 1965

The blueberries brought many comments on their size and flavor and we were extremely pleased on the little care they needed to become such a pleasure.

MRS. ANN. JENSEN, East Northport, N. Y.



IVANHOE

BEAUTIFUL CLUSTERS **IVANHOE** UNUSUAL FLAVOR

Ivanhoe is outstanding because of its unusually beautiful berry clusters which look much like bunches of blue grapes. Another feature is the wonderful fruity flavor. However, this flavor does not develop until the berries are fully ripe, which is about a week after they first turn blue. The berries are very large and have a dark blue color. Plants of Ivanhoe grow very rapidly and have a fine appearance. And for flavor we believe that a ripe Ivanhoe is one of the best of all blueberries.

Extra-Large Plants of Hybrid Blueberries 4 to 5-yr., 24 to 36 in.

We have a limited supply of big, 4 to 5-year plants of **BERKELEY, BLUERAY,** and **COVILLE.** They have already produced at least two nice crops of berries and are loaded with fruit buds for the next crop. But for good results with these large plants remove about half of the total top growth and allow only a small crop to develop. This will allow the root system to become well established and give best results in succeeding years. You will be amazed at the big, delicious berries these hybrid varieties will yield.

PRICES: $3.95 each; 3 for $10.95, plus postage. Please see page 21 for postal rates.

NO MATTER HOW MUCH YOU PAY

You will never buy berries as good as the fresh harvests of your own locality. With "shipped-in" berries the quality and flavor cannot match the vine-ripened perfection right out of the patch. That's why more and more folks grow their own. Grow more! Save more! Have more!

Growing Blueberries

These instructions apply to Rayner's hardy, top-quality plants. Be sure to prune about half of top from large bushes before planting.

WHERE BLUEBERRIES CAN BE GROWN: The varieties of blueberries we offer will grow well from North Carolina to Maine and westward to Michigan and Missouri. They also grow well in parts of California, Oregon, and Washington. For best fruit production blueberries require full sunlight. The best time to plant is early spring. Frost or snow will not harm newly planted blueberries.

SOIL ACIDITY: One of the most important factors in successful blueberry culture is to use acid soil—a pH range of 4.0 to 5.5 is considered best. Many soils naturally have this much acidity, but in many areas where blueberries could otherwise grow well the soil is not sufficiently acid. For small-scale plantings this difficulty can be readily overcome. One of the best methods is to dig a hole about 18 in. deep and about the same in width. Mix half of this soil with well-rotted leaf mold or peat and then mix in 3 oz. ammonium sulfate fertilizer plus ¼ lb. of cottonseed meal. Replace this mixture in the hole and set the plant properly, and you have overcome the main problem in growing blueberries.

DRAINAGE: Cultivated blueberries require a uniform supply of moisture but they will not tolerate poorly drained or soggy soil. Avoid heavy clay soil for large plantings.

HOW TO PLANT: If the roots have become dry in shipment, they should be placed in water for about an hour. Best results are obtained if about half of the top growth is pruned from the plant. This allows the plant to become established faster and better. It will rapidly make an abundance of new, sturdy growth. After the holes have been dug and the soil prepared as previously described, the plant should be set so that the upper roots are covered by about an inch of soil. It is very important not to set blueberries too deep in the ground, for they may make poor growth or die. It is helpful to water the newly set plant with a soluble fertilizer, using about one quart of solution per plant. Next the soil should be firmly packed around the roots and a mound of soil made around the edge of the hole so that the plant can be properly watered during dry weather. Rooted cuttings should be grown for two or three years in a bed containing lots of sawdust plus cottonseed meal and acid fertilizer. They can be transplanted as desired.

In commercial plantings blueberries are usually set 4 ft. apart in the row with 8 to 10 ft. between rows. However, in home gardens they may be arranged in any manner and can be pruned to nearly any desired shape. Blueberries are especially suitable for hedge plantings and other ornamental uses.

MULCHING: It is very helpful if a heavy mulch can be maintained around the plants. Any natural organic matter is satisfactory. Sawdust—new or old, oak or pine—also gives excellent results and we strongly recommend its use. However, when sawdust is used as a mulch, it is necessary to add extra nitrogen to the soil. For each ton of sawdust approximately 24 lbs. of actual nitrogen is needed. This can be obtained from 115 lbs. of ammonium sulfate or 72 lbs. of ammonium nitrate. This corresponds to 13 ounces of ammonium sulfate per bushel of sawdust or 8 oz. of ammonium nitrate per bushel. Any other type of fertilizing material could be used if the proper amount of nitrogen is provided.

FERTILIZING: We definitely recommend that blueberries should receive regular fertilizer applications. Use an acid-type, complete fertilizer early in the spring at the rate of about ¼ lb. per each small plant or ½ lb. for large plants. Another application in early summer is usually helpful. Do not apply fertilizer in late summer or fall, since it may make plants tender and thus subject to winter injury. Cottonseed meal, ¼ lb. for young plants and ½ lb. for old plants, is a complete organic fertilizer that is ideal for blueberries and most other plants. Ammonium sulfate, 2 oz. per small plant and ¼ lb. per large plant, is an excellent commercial fertilizer. About 250 lbs. per acre is recommended for large plantings. Half should be applied in March or April and the rest during May or June.

PRUNING: When first planted, about half of the upper branches should be removed. Then during each dormant season further pruning is required. Since blueberries usually make too much top growth, some of this must be thinned out or the fruit will be small. Normally it is best to prune out slender twigs, leaving the heavier stronger growth. Low branches should be removed as well as any weak or dead wood. Write for Rayner's Bulletins 3 and 18 on blueberry pruning.

YELLOW FOLIAGE: Blueberries are especially free of disease and insect troubles and thus do not generally require any spraying or dusting. The most common trouble is a yellow color of the leaves (chlorosis). This yellowing can be corrected in two ways—one is by making the soil more acid by addition of vinegar or sulphur, and the other is to add iron directly to the plant and to the soil. Yellow leaves will often become a healthy green color within a few days, after iron is added. We recommend iron chelate for this purpose. About 1 level tablespoonful in a gallon of water can be applied to the leaves and soil and will be of much help in improving foliage.

CROSS-POLLINATION: Since cultivated blueberries are partly self-sterile it is best to plant at least two varieties for cross-pollination. Any combination of varieties is usually satisfactory.

RAYNER'S FAMOUS Blueberries

FRESH, FULL RIPE BLUEBERRIES ARE A FLAVOR SENSATION—WONDERFUL FOR PROFIT AS WELL AS ORNAMENTAL BEAUTY. BUY YOUR PLANTS DIRECTLY FROM THE PRODUCER AND GET BETTER PLANTS AT LOWER PRICES. THESE ARE THOSE WONDERFUL IMPROVED VARIETIES THAT HAVE BEEN PROVEN SO SUCCESSFUL BY MANY YEARS OF PLANTING IN HOME GARDENS AND FOR COMMERCIAL USE. RAYNER BROS. OFFER THE MOST COMPLETE SELECTION OF THE BEST VARIETIES. **FULL PLANTING INFORMATION ON PAGE 37. Other Varieties, pages 34 to 36.**

WEYMOUTH Very Early, Large Size

Weymouth is a fine money maker since it is the earliest blueberry to ripen and brings highest prices. It is excellent for home gardens and a leading commercial variety. Berries are large, dark blue, and have a mild, sweet flavor. Plants of Weymouth are low-growing and very hardy.

RANCOCAS Early and Vigorous

Rancocas is an especially dependable variety since it has such vigor and winter-hardiness that it will grow in an unusually wide range of climates and soils. Its berries are sweet in flavor and form tight, attractive, clusters; they are firm and fine for preserves, and freezing.

STANLEY Midseason Fine Quality

Stanley is one of our favorite varieties because it makes tall, vigorous plants that produce heavy crops of especially beautiful clusters of berries. The flavor and quality is excellent and thus Stanley is one of the best for eating "off the bush" as well as for processing.

CONCORD Midseason, Very Hardy

Concord is a nice home garden blueberry because of its combination of vigorous, hardy plant growth and beautiful, high quality fruit. The berries are of medium size, have a deep blue color, and are good for freezing. Concord is a dependable producer of big crops.

PEMBERTON Midseason Vigorous

Pemberton is a very good variety for home gardens since it is quite vigorous, and a dependable producer of fine crops of very attractive berries. These dark blue, high quality berries are quite firm and have very good flavor for fresh use or preserves and freezing.

JERSEY Late and Sweet

Jersey is one of the leading commercial varieties since it produces unusually big crops of beautiful, high quality, delicious berries. Its plants are very vigorous and hardy. For home gardens Jersey is an excellent late variety and for profit it is an established leader.

RUBEL Wild Flavor, Late

Rubel is a selection from a wild, productive highbush blueberry. It has that wonderful flavor of wild huckleberries and is therefore a favorite for home gardens. Plants of Rubel are vigorous and very winter hardy. Berries of Rubel are medium in size and have good quality.

DIXI Very Late and Very Large

Dixi has the largest berries of any of the older varieties. The berry quality is good and the texture is firm. Plants are vigorous and have an open spreading shape. Dixi is a very heavy producer and ripens late.

JUMBO Size Blueberry Plants—5 yr. 24 to 36-in. Plants

We have a limited supply of extra large plants that have already fruited for two years in the nursery and will bear lots of fruit this coming season.

The varieties available in this 24 to 36 in. size are: **Rancocas, Jersey, Dixi, Concord and Stanley.** These are really beautiful plants and are certain to bear a crop. For a big crop in a short time, try these Jumbo plants.

$2.85 each; 3 for $7.95; 10 for $23.00. **SEE SPECIAL OFFERS, BACK COVER**

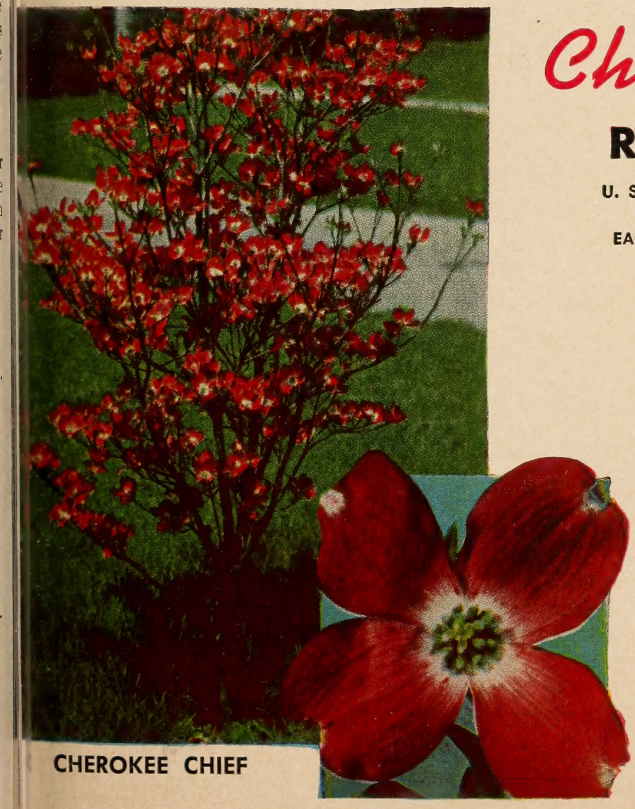
Sensational NEW OZARK BEAUTY EVERBEARER

Ozark Beauty has been a real sensation wherever it has been grown but we have delayed offering it until a sufficient supply of virus-free plants was available. Now you can start with the best stock of one of the best everbearers of all times.

Ozark Beauty is well named since its berries are truly beautiful, with a bright sparkling color and fine green cap. The size is large throughout its picking season from June until frost and its flavor is unusually sweet and delicious. Production is extra heavy for an everbearer, with official yields as high as 12,000 quarts per acre. In our opinion one of the most important features is its good plant production and vigor which make Ozark Beauty a very dependable everbearer and much easier to grow than most strawberries of this type. Although it originated in the south, Ozark Beauty is very hardy since it has been tested for three years in Iowa where the winter temperature reaches 20° below zero. Buy Rayner's virus-free plants for best results.

25 PLANTS $3.90; 100 PLANTS $8.80; 1000 FOR $39.00. **Complete Price List Page 20.**

Prices in this catalog DO NOT include postage. **See page 21 for Postal Rates.**



CHEROKEE CHIEF

Cherokee Chief

RED DOGWOOD

U. S. Plant Patent No. 1710

EACH TREE CARRIES THIS PATENT TAG

At last there is a truly red Dogwood—not a pink; but a fine, deep red that is amazingly different. The wonderful new Cherokee Chief originates from a bud sport and is propagated by grafting on to a sturdy rootstock. Even the new foliage is a red color, and in the fall the leaves are scarlet. In late summer there is an abundance of fine red berries that add to the beauty of this excellent ornamental tree. Cherokee Chief is very vigorous and makes a fine tree with uniform branching.

It will grow in full sun but prefers some shade for best results. Hardy to about 10° below zero.

Sturdy, well rooted trees, 24-30 in. tall, $3.95 plus postage

Complete Shipping Information and Postal Rates are given on page 21.
